The predecessor of the F109 system gained big time credibility for its outstanding audio performance and the high quality finishing of the single components with the aluminium front panel reflecting the inside quality. Now the remodeled system is not only consists of a Stereo-Receiver and CD-Player which works fully digital as a team, but the it is extended by Network Audio Player DNP-F109 which of course can be connected digitally to the DRA-F109 Receiver. By that you can enjoy all your digital media from PC/NAS, internet radio or iDevice using AirPlay in the highest quality possible. No conversion of the digital signal is required as the output stages are digital too and the source signal can be kept as “untouched” as possible. All can be controlled by the new generation iOS and Android app or simply by the easy to use remote handset.
