Thank you for purchasing this Denon product.
To ensure proper operation, please read this owner’s manual carefully before using the product.
After reading this manual, be sure to keep it for future reference.

## Accessories

Check that the following parts are supplied with the product.

<table>

## Main features

### High quality sound

- **Advanced AL32 Processing and high precision 32 bit D/A converter**
  Equipped with Advanced AL32 Processing, Denon’s unique analog wave reproduction technology. Reproducibility of weak signals is increased by expanding the 16-bit digital data to 32 bits. Additionally, the unit is equipped with a 192 kHz/32-bit compatible high performance D/A converter for converting the digital data expanded by Advanced AL32 Processing into analog signals.

- **High sound quality operational amplifier + current buffer**
  The unit is equipped with a low noise, high sound quality operational amplifier. The output level features a discrete current buffer circuit for fully driving the headphones.

- **Low phase noise crystal**
  Two low phase noise crystals (22.5792 MHz, 24.576 MHz) are used for the master clock. The crystals remove jitter from the master clock and faithfully reproduce the high resolution sound source by syncing with and switching the sampling frequency.

### High performance

- **Equipped with a USB-DAC function to support playback of high-resolution sound sources**
  This unit supports the playback of high resolution audio formats such as DSD (2.8/5.6 MHz) and PCM files up to 192 kHz/24 bits. It provides high quality playback of high resolution files.

- **GAIN switch**
  Switching the gain enables optimum driving of various types of headphones that have different impedances.
Part names and functions

For buttons not explained here, see the page indicated in parentheses ( ).

Front panel

1. **Power/Volume knob**
   - This turns the power on/off. (p. 21)
   - This adjusts the volume level. (p. 22)

2. **Power indicator (POWER)**
   The standby indicator changes as shown below according to the status of the unit.
   - Power on: Green
   - Power off: Off

3. **Headphones jack**
   Used to connect headphones.
   
   **NOTE**
   To prevent hearing loss, do not raise the volume level excessively when using headphones.

4. **Battery indicator (CHARGE)**
   This displays the amount of remaining battery and charge status. 
   (p. 11)
1 Gain selecting switch (GAIN)
   This switches the headphone output gain. (p. 35)

2 Output mode selecting switch (OUTPUT)
   Set the output mode according to the device to be connected.
   (p. 36)

3 Charge mode selecting switch (CHARGE)
   Switches the charge mode when the power is on. (p. 36)

4 Input source selecting switch (INPUT)
   This switches the source being played back on the unit. (p. 22)
Rear panel

1 **USB-DAC port**
   Connects to a computer or USB charger. (p. 10, 14)

2 **iPod/iPhone port**
   Connects to an iPod/iPhone/iPad. (p. 15)

3 **AUX input connector**
   Connect this to the headphones jack on a smartphone or portable player. (p. 17)
Charging for the first time

This unit has an internal battery. Be sure to charge the battery before use. It takes approximately 3.5 hours to recharge the battery when it is completely run down using a USB charger (1.5 A or higher) or approximately 6.5 hours when charging from a computer.

1 Turn the power off.
   - This unit can be charged when the power is on, but doing so increases the time required for charging.

2 Use the supplied micro USB cable to connect this device to a computer, or connect a USB charger to the USB-DAC port.

![Diagram of connections](image)

**NOTE**

- Before USB connecting this unit to your computer, install the driver software in your computer. (v. p. 24)
- Download the driver software from the DA-10 page of the Denon website.
- It may take some time for this unit to be recognized as an enabled device on the computer the first time it is connected to a computer.
- Charge this unit in a location where the ambient temperature is between 5 to 35 °C. The unit may not charge if the temperature is outside this range.
- Connect this unit directly to a computer. It may not charge correctly if connected through a USB hub, etc.
- If you are listening to music at high volume while charging this unit, the battery may still run down even while charging the unit if the speed at which power is consumed is faster than the charging speed.
- Do not charge this unit while it is inside the supplied pouch, as doing so will cause heat to build up. Remove this unit from the pouch before charging.
- Remove this unit from the charger when charging is complete.
- Charge this unit approximately once every six months, even if you do not use it for a long time.
- Do not connect this unit to a device with a charging voltage other than 5V.
- If you connect this unit to a computer, make sure that the power of the computer is on.
Battery indicator

The status of the battery when charging this unit or when using this unit are displayed as described below.

1 When connected using the micro USB cable (charging)
   - Fully charged: Lit green
   - Charging: Lit orange
   - Charging stopped: Off
   - Not charging correctly: Lit red
     - If the battery indicator is lit in red during charging, it is recommended that you change the battery.
     - Contact our customer service center or repair center.

2 When running on the battery
   The remaining battery power is displayed for approximately 10 seconds when the power is turned on.

<table>

Connecting a headphone 13
Connecting a PC or Mac 14
Connecting an iPod to the iPod/iPhone port 15
Connecting a smartphone or portable player 17
Connecting an amplifier 18
Storing in the Pouch 19

Cables used for connections

Provide necessary cables according to the devices you want to connect.

- Micro USB cable (Micro B) (supplied)
- Lightning USB cable (supplied)
- 30 pin USB cable (supplied)
- Stereo mini plug cable (supplied)
- Audio cables (sold separately)
Connecting a headphone

1. Set the output mode selecting switch to “VAR”.

NOTE
Audio is output at a high volume from the headphones jack if the output mode selection switch is set to “FIXED”. (☞ p. 36)
Connecting a PC or Mac

By connecting a computer to the USB-DAC port on this unit using a micro USB cable (supplied), music data stored on the computer can be played back using this unit. (p. 24)

- Before USB connecting this unit to your computer, install the driver software in your computer. (p. 24)
- Download the driver software from the DA-10 page of the Denon website.

NOTE

Use the supplied cable or a 3 m or less cable to connect to a computer.
Connecting an iPod to the iPod/iPhone port

You can enjoy music stored on an iPod.

- To connect an iPod/iPhone/iPad to this unit, use the USB cable that was supplied with the iPod/iPhone/iPad or the USB cable supplied with this unit.
- For operating instructions, see “Playing an iPod” (p. 33).
- For information on the iPod models that can be played back with this unit, see “Supported iPod/iPhone/iPad models” (p. 16).
Supported iPod/iPhone/iPad models

- iPod classic
  - iPod classic 120GB (2009)
  - iPod classic 160GB (2009)

  - iPad mini 2nd generation
    - 16GB
Connecting a smartphone or portable player

By connecting the stereo mini plug cable (supplied) to the AUX input connector of this unit and the audio output connector of a smartphone or portable player, you can enjoy audio from the connected device.

- For operating instructions, see “Playing audio from devices connected to the AUX connector” (p. 34).
1  Set the output mode selecting switch to “FIXED”. (p. 36)

**NOTE**
An amplifier or speaker(s) must be connected to play back music. For details on connections, see your device’s manual.

Basic operation

Turning the power on

1. Turn the Power/Volume knob to the right to switch on the power.
   The power indicator (POWER) lights.
   - When running on the battery, the battery indicator (CHARGE) blinks and displays the remaining battery power. (☞ p. 11)

Turning the power off

1. Turn the Power/Volume knob to the left until a “click” is heard.
   The power turns off and the power indicator (POWER) turns off.

NOTE

The battery runs down if the power is left on.
Be sure to turn the power off when not using this unit.
### Selecting the input source

1. Select the playback source using the input source switch (INPUT).

<table>
<thead>
<tr>
<th>Source</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>USB-DAC</td>
<td>Plays back audio files on the computer.</td>
</tr>

<td>Plays back the iPod.</td>
</tr>
<tr>
<td>AUX</td>
<td>Plays back analog audio signals input to the AUX connector.</td>
</tr>
</tbody>
</table>

### Adjusting the volume

1. Turn the Power/Volume knob to adjust the volume.
Using as a D/A converter

Digital audio signals input from a computer into this unit can be converted and output as analog signals using this unit’s D/A converter. (D/A converter function)

- DSD is a registered trademark.
- Microsoft, Windows Vista, Windows 7 and Windows 8 are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- Apple, Macintosh and Mac OS are trademarks of Apple Inc., registered in the U.S. and other countries.
Connecting and playing back from a computer (USB-DAC)

You can enjoy high-quality audio playback from the D/A converter built in to this unit by inputting PCM signal or DSD signal music files into this unit from a computer via USB connection.

- Before USB connecting this unit to your computer, install the driver software in your computer.
- Drivers do not need to be installed for Mac OS.
- Also, you can use whichever commercially available or downloadable player software you like to playback files on your computer.

■ Computer (recommended system)

OS
- Windows® Vista, Windows 7 or Windows 8/8.1
- Mac OS X 10.6.3 or later

USB
- USB 2.0: USB High speed/USB Audio Class Ver.2.0

Before USB connecting this unit to your computer, install the driver software in your computer.

- Drivers do not need to be installed for Mac OS.
- Also, you can use whichever commercially available or downloadable player software you like to playback files on your computer.

■ Installing the dedicated driver (Windows OS only)

1. Disconnect the USB cable between your PC and the unit.
   - The driver software cannot be installed correctly if your PC is connected to the unit by a USB cable.
   - If the unit and your computer are connected by a USB cable and the computer is switched on before installation, disconnect the USB and restart the computer.

2. Download the dedicated driver from the “Download” section of the DA-10 page of the Denon website onto your PC.

3. Unzip the downloaded file, select the 32-bit or 64-bit exe file that matches your Windows operating system, and double-click the file.
4 Install the driver.
① Select the language to use for the installation.
② Click “OK”.

③ The wizard menu is displayed. Click “Next”.

![USB Audio - InstallShield Wizard]

Welcome to the InstallShield Wizard for USB Audio

The InstallShield(R) Wizard will install USB Audio on your computer. To continue, click Next.

WARNING: This program is protected by copyright law and international treaties.

Next >
4) Read the Software Licensing Agreement, and click “I accept the terms in the license agreement”.
5) Click “Next”.

6) Click “Install” on the installation start dialog.
- The installation starts. Do not perform any operation on the PC until the installation is completed.
7) In the Windows security dialog, select “Always trust software from “DandM Holdings Inc.””.
8) Click “Install”.

9) When the installation is completed, click “Finish”.

5) With the unit power off, connect the unit and PC using a micro USB cable (supplied).
   - For the connection procedure, refer to the “Connecting a PC or Mac” (§ 14) section.
6 Turn the input source select switch (INPUT) to USB-DAC, and turn on the power of the unit.
   - When the unit power is turned on, the PC automatically finds and connects to the unit.

7 Checking the installed driver.
   ① Click the “Start” button and click “Control Panel” on the PC.
   - The control panel setting list is displayed.
   ② Click the “Sound” icon.
   - The sound menu window is displayed.
   ③ Check that there is a checkmark next to “Default Device” under in “Digital Audio Interface” of the “Playback” tab.
   - When there is a checkmark for a different device, click DENON USB Audio and “Set Default”.

8 Checking audio output.
   Outputs a TEST signal from the PC and checks the audio output from the USB-DAC function.
   ① Select “Digital Audio Interface” and click “Properties”.
   - The Digital Audio Interface Properties window is displayed.
2) Click the “Advanced” tab.
3) Select the sampling rate and bit rate to be applied to the D/A converter.
   - It is recommended that “2 channel, 24 bit, 192000 Hz (Studio Quality)” is selected.
4) Click “Apply”.
5) Click “Test”.
   - Check that audio from this unit is output from the PC.

**NOTE**
- The dedicated driver must be installed in the PC before this unit is connected to a PC. Operation will not occur correctly if connected to the PC before the dedicated driver has been installed.
- Operation may fail in some PC hardware and software configurations.
**Audio Device Settings (Mac OS X only)**

1. Move the cursor to “Go” on the computer screen, and then click “Utilities”.
   - The utility list is displayed.
2. Double-click “Audio MIDI Setup”.
   - The “Audio Devices” window is displayed.
3. Check that “Use this device for sound output” is checked in “DA-10”.
   - If a different device is checked, select and “Secondary click” on “DA-10”, and then select “Use this device for sound output”.
4. Select the “DA-10” format.
   - It is normally recommended to set the format to “192000.0 Hz” and “2ch-24 bit Interger”.
5. Click “Quit Audio MIDI Setup”.

![Audio Device Settings (Mac OS X only)](image_url)
Playback

Install the desired player software on your computer beforehand.
Use the USB-DAC port to connect this unit to a computer. (p. 14)

1. Turn the input source select switch (INPUT) to USB-DAC.
   Start playback on the computer’s player software.

Files that can be played back

See “D/A converter” (p. 41).

NOTE

- Perform operations such as playback and pause on the computer.
- You can also control the volume and equalizer on the computer. Enjoy playing music at the desired volume.
- When this unit is functioning as a D/A converter, sound is not output from the computer’s speakers.
- If the computer is disconnected from this unit while the computer music playback software is running, the playback software may freeze. Always exit the playback software before disconnecting the computer.
- If an error occurs on the computer, disconnect the micro USB cable and restart the computer.
- Use the supplied cable or a 3 m or less cable to connect to a computer.
Playing back an iPod

- You can use the USB cable provided with this unit or the USB cable provided with the iPod to connect the iPod with the unit’s iPod/iPhone port and enjoy music stored on the iPod.
- For information on the iPod models that can be played back with this unit, see “Supported iPod/iPhone/iPad models” (v p. 16).
Playing an iPod

1. Turn the input source select switch (INPUT) to iPod/iPhone.
2. Connect the iPod to the USB port.
3. Operate iPod itself directly while seeing the iPod screen to play back music.

NOTE
- Denon will accept no responsibility whatsoever for any loss of iPod data.
- The iPod cannot be charged by connecting to this unit.
Playing audio from devices connected to the AUX connector

You can connect a smartphone or portable player to the AUX connector of this unit and play back audio.

1. Turn the input source select switch (INPUT) to AUX.
2. Connect a smartphone or portable player to the AUX connector of this unit. (☞ p. 17)
3. Play the component connected to this unit.
Setting list

By default, this unit has recommended settings defined. You can customize this unit based on your existing system and your preferences.

1 Gain selecting switch (GAIN)

This switches the headphone amplifier gain. Set this according to the connected headphones. It is recommended that you first listen using “NORM”, and then switch to “HIGH” if the volume is too low.

<table>
<thead>
<tr>
<th>NORM (Default):</th>
<th>Set the gain of the headphone amplifier to “NORM”.</th>
</tr>
</thead>
<tbody>
<tr>
<td>HIGH:</td>
<td>Set the gain of the headphone amplifier to “HIGH”.</td>
</tr>
</tbody>
</table>

**NOTE**
- If the output mode selection switch (OUTPUT) is set to “FIXED”, the gain setting will be “NORM” even if the gain selection switch (GAIN) is “HIGH”.
- The headphone volume varies depending on the gain setting. Decrease the volume the audio first if changing this setting while listening to audio.
2 Output mode selecting switch (OUTPUT)
Set the output mode according to the device to be connected.

<table>
<thead>
<tr>
<th>FIXED:</th>
<th>This fixes the volume level output from the headphones jack. Set when connected to an external amplifier or active speaker.</th>
</tr>
</thead>
<tbody>
<tr>
<td>VAR (Default):</td>
<td>The volume level output from the headphones jack can be adjusted. Set when listening using headphones.</td>
</tr>
</tbody>
</table>

NOTE
- This setting is not enabled even when the output mode selection switch (OUTPUT) is switched when the power is turned on. Turn the unit's power on and off again to enable this setting.
- When “FIXED” is set, audio is output from the headphones jack, but the volume level is the maximum level and cannot be adjusted. When “FIXED” is set, do not connect headphones to this unit.

3 Charge mode selecting switch (CHARGE)
Switches the charge mode when the power is on.

<table>
<thead>
<tr>
<th>ON (Default):</th>
<th>This unit charges when it is connected to a computer or USB charger. It charges when the power is on or off.</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF:</td>
<td>To prevent noise caused by charging, this unit is not charged when the power is on, even if this unit is connected to a computer or USB charger. This unit is charged when the power is off, whether the status is CHARGE ON or CHARGE OFF.</td>
</tr>
</tbody>
</table>
## Troubleshooting

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
Troubleshooting

1. Are the connections correct?
2. Is the set being operated as described in the owner’s manual?
3. Are the other devices operating properly?

If this unit does not operate properly, check the items listed in the table below. Should the problem persist, there may be a malfunction. In this case, disconnect the power immediately and contact your store of purchase.

### Power does not turn on / Power is turned off

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause / Solution</th>

Explanation of terms

**DSD (Direct-Stream Digital)**
One of the audio data recording methods, it is the signal aspect used to store audio signals on a super audio CD, and is Δ-Σ modulated digital audio. It is configured of an array of single bit values at a 2.8224MHz sampling rate.

**WMA (Windows Media Audio)**
This is the audio compression technology developed by Microsoft Corporation.
WMA data can be encoded using Windows Media® Player.
To encode WMA files, only use applications authorized by Microsoft Corporation. If you use an unauthorized application, the file may not work properly.

**Sampling frequency**
Sampling involves taking a reading of a sound wave (analog signal) at regular intervals and expressing the height of the wave at each reading in digitized format (producing a digital signal).
The number of readings taken in one second is called the “sampling frequency”. The larger the value, the closer the reproduced sound is to the original.

**Bit rate**
This expresses the read amount per 1 second of video/audio data recorded in a disc. A larger number means higher sound quality, but also means a larger file size.

**Linear PCM**
This is an uncompressed PCM (Pulse Code Modulation) signal. This is the same system used for CD audio but uses 192 kHz, 96 kHz, and 48 kHz sampling frequencies on Blu-ray Disc or DVD and provides higher resolution than CD.
Trademark information

"Made for iPod", "Made for iPhone" and "Made for iPad" mean that an electronic accessory has been designed to connect specifically to iPod, iPhone or iPad, respectively, and has been certified by the developer to meet Apple performance standards.

Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards. Please note that the use of this accessory with iPod, iPhone or iPad, may affect wireless performance.

iPod, iPhone, iPod, iPod classic, iPod nano, iPod shuffle and iPod touch are trademarks of Apple Inc., registered in the U.S. and other countries.

- Individual users are permitted to use iPad, iPhone, iPod, iPod classic, iPod nano, iPod shuffle, and iPod touch for private copy and playback of non-copyrighted contents and contents whose copy and playback is permitted by law. Copyright infringement is prohibited by law.

Specifications

Audio performance

Channels: 2-channels
Playable frequency range: 2 Hz – 96 kHz
Playable frequency response: 2 Hz – 50 kHz (-3 dB)
(DSD mode, PCM sampling frequency: 192 kHz)
2 Hz – 20 kHz
(PCM sampling frequency: 44.1 kHz)
Harmonic distortion: 0.003 % (1 kHz, Audible range)
Headphone output: 40 mW + 40 mW (32 Ω/ohms, 1 % distortion)
18 mW + 18 mW (600 Ω/ohms, 1 % distortion)
Supported impedance: 8 Ω/ohms - 600 Ω/ohms
### General

- **Maximum Input (AUX):** 2 Vrms/22 kΩ/kohms
- **Operating temperature:** 0 °C - 40 °C
- **Charging temperature:** 5°C - 35°C
- **Power requirement:** DC 3.8 V Lithium-ion battery 3200 mAh
- **Continuous battery usage time:**
  - Approx. 7 hours (when iPod is connected, 1 mW + 1 mW (32 Ω/ohms) output)
  - Approx. 24 hours (when AUX is connected, 1 mW + 1 mW (32 Ω/ohms) output)
- **Charging time:**
  - Approx. 3.5 hours (when connected to a 1.5 A or higher USB charger)
  - Approx. 6.5 hours (when connected to a computer)

For the purpose of improvement, the specifications and design are subject to change without notice.
