Before applying power

Caution: Read this section carefully to ensure safe operation.

Units are designed for operation as follows.

<table>
<thead>
<tr>
<th>Region</th>
<th>Voltage</th>
</tr>
</thead>
<tbody>
<tr>
<td>U.S.A. and Canada</td>
<td>AC 120 V only</td>
</tr>
<tr>
<td>Australia</td>
<td>AC 240 V only</td>
</tr>
<tr>
<td>China</td>
<td>AC 220 V only</td>
</tr>
<tr>
<td>Other countries</td>
<td>AC 110-120/220-240 V switchable</td>
</tr>
</tbody>
</table>

**AC voltage selection**

The AC voltage selector switch on the rear panel is set to the voltage that prevails in the area to which the unit is shipped. Before connecting the power cord to your AC outlet, make sure that the setting position of this switch matches your line voltage. If not, it must be set to your voltage in accordance with the following direction.

Note:

Our warranty does not cover damage caused by excessive line voltage due to improper setting of the AC voltage selector switch.

---

Safety precautions

Caution: Read this section carefully to ensure safe operation.

**WARNING**: TO PREVENT FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

---

Unpacking

Unpack the unit carefully and make sure that all accessories are put aside so they will not be lost. Examine the unit for any possibility of shipping damage. If your unit is damaged or fails to operate, notify your dealer immediately. If your unit was shipped to you directly, notify the shipping company without delay. Only the consignee (the person or company receiving the unit) can file a claim against the carrier for shipping damage. We recommend that you retain the original carton and packing materials for use should you transport or ship the unit in the future.

**Accessories**

- FM indoor antenna (1)
- AM loop antenna (1)
- Loop antenna stand (1)
- Remote control unit (1)
- Batteries (R6/AA) (2)
Special features

SRS 3D
This epoch-making SRS 3D (Sound Retrieval System 3 Dimension) system produces a three dimensional sound stage from normal stereo signals. It greatly improves the perceived width and depth of the sound stage, as well as sound imaging, while expanding the listening area.

Station preset
This unit incorporates a function for storing received stations in preset memory with a simple operation. It is very convenient to preset the stations you like. The preset stations can be recalled also very easily.

Speaker system
Setting the Speaker Impedance Selector to match the impedance of your speakers allows you to take full advantage of your speaker's performance characteristics by driving them under the best possible conditions. We've also included 2 sets of speaker terminals so you can connect two different sounding speaker systems, or use two sets of speakers at once (only when both sets of speakers have an impedance of 8 ohms or more).

TAPE 2 (MONITOR)
The TAPE 2 (MONITOR) jacks of this unit accept the connection of a cassette deck, graphic equalizer, surround processor, etc. When a 3-head cassette deck is connected to the TAPE 2 (MONITOR) jacks, it is possible to monitor the sound which has just been recorded during recording.

Remote controllable audio function
By connecting KENWOOD source components such as a cassette deck and CD player through system control connection, the basic operations of these components can be controlled from the remote control unit provided with this unit. A single remote control unit can control the entire audio system easily.

PLAY

REC

*Tape deck 2 (Graphic equalizer)

Tape deck 1 or MD recorder

CD player

Turntable

*Do not connect system control cord to the cassette deck
connected to the TAPE 2 (MONITOR) jacks.
About the system control connections

Connecting system control cords after connecting a KENWOOD audio component system lets you take advantage of convenient system control operations.

- **XS8 Mode**: lets you combine XS, XS, and XS terminals
- **SL16 Mode**: for SL16 terminals only

This unit is compatible with both [XS8] and (SL16) modes. It comes from the factory set to the [XS8] mode. To switch to the [SL16] mode, follow the instructions in “SWITCHING FROM [XS8] TO [SL16]” below.

**EXAMPLE: [XS8] mode connections**
The underlined portion represents the setting of the system control mode.

- Some CD players and cassette decks are not compatible with the [SL16] system control mode. Be sure to use the [XS8] system control mode when making system connections with equipment that is not [SL16] compatible.
- Some MD players are not system control compatible. You cannot make system control connections to this kind of equipment.

**ABOUT THE SYSTEM CONTROL OPERATIONS**

Remote Control (Except [SL16])
Lets you operate source components with the system remote supplied with this unit.

Automatic Operation (Except [XR] equipment)
When you start playback from a source component, the input selector on this unit switches to that component automatically. (Except TAPE 2)

Synchronized Recording (Except [XR] equipment)
Lets you synchronize recording with the start of playback when recording from CD, MD, or analog discs.

**SWITCHING FROM [XS8] TO [SL16]**
You can easily change the system control mode with the following operation. Do this operation after completing all connections.

Switching to [SL16]: Unplug the AC power cord from the wall outlet, then plug it back in while holding down the AUTO/MANUAL key.

Switching back to [XS8]: Unplug the AC power cord from the wall outlet, then plug it back in while holding down the BAND key.

- This operation will not affect items stored in the memory.

The system control mode will revert to [XS8] if the power cord is disconnected from the AC outlet for three consecutive days. If you would like to make the unit completely (and permanently) [SL16] compatible, please consult your nearest retailer or the KENWOOD Marketing Department.

1. Connect all cords firmly. If connections are loose, there could be loss of sound or noise produced.
2. When plugging and unplugging connection cords, be sure to first remove the power cord from the AC outlet. Plugging/unplugging connection cords without removal of the power cord can cause malfunctions or damage to the unit.
3. Do not connect up a power source which is larger than that indicated on the socket at the rear of the unit.
Connection of speakers

Speaker protection circuitry

- Never short-circuit the + Pad - speaker cords.
- If the left and right speakers are connected inversely or if the speaker cords are connected with reversed polarity, the sound becomes unnatural with ambiguous acoustic image positioning. Be sure to connect the speakers and speaker cords correctly.

Setting the speaker IMPEDANCE SELECTOR

<table>
<thead>
<tr>
<th>Speaker impedance</th>
<th>Selector position</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 Ω, 6 Ω</td>
<td>![Selector]</td>
</tr>
<tr>
<td>8 Ω, 16 Ω</td>
<td>![Selector]</td>
</tr>
</tbody>
</table>

When using the speaker A and B simultaneously

<table>
<thead>
<tr>
<th>Speaker impedance</th>
<th>Selector position</th>
</tr>
</thead>
<tbody>
<tr>
<td>8 Ω, 16 Ω</td>
<td>![Selector]</td>
</tr>
</tbody>
</table>

CAUTION: TO PREVENT FIRE OR DAMAGE REQUIRING SERVICE, SET THE IMPEDANCE SELECTOR SWITCH AS DESCRIBED BELOW.

According to the impedance of the speakers used, set the speaker IMPEDANCE SELECTOR on the rear panel as shown in the table.

- When the IMPEDANCE SELECTOR switch is set to “AorB: LESS THAN 8Ω, AandB: 8Ω OR MORE”, it is possible to use the A and B speakers at the same time. Therefore, when using the speakers A and B simultaneously, be sure to set the IMPEDANCE SELECTOR switch to the “AorB: LESS THAN 8Ω, AandB: 8Ω OR MORE” position.
- During speaker system connection and operation of the speaker IMPEDANCE SELECTOR, set the REMOTE POWER key to OFF.
**Connection of antenna**

**Connection method to each antenna terminal**
1. Push lever.
2. Insert cord.
3. Return lever.

**AM loop antenna connection**
The supplied antenna is for indoor use. Place it as far as possible from the main system, TV set, speaker cords and power cord, and set it to a direction which provides the best reception.

**AM outdoor antenna connection**
If the reception is poor when the AM loop antenna is used, distribute a vinyl-coated wire of more than 6 meters outdoors, without disconnecting the loop antenna.

**FM indoor antenna connection**
The accessory antenna is for temporary indoor use only. For stable signal reception we recommend using an outdoor antenna. Remove the indoor antenna if you connect one outdoors.

**FM outdoor antenna connection**
Lead the 75 Ω coaxial cable connected to the FM outdoor antenna into the room and connect it to the FM 75 Ω terminal.

**FM DE-EMPHASIS / CHANNEL SPACE switch (Except for U.S.A., Canada and Australia)**

The FM DE-EMPHASIS / CHANNEL SPACE switch on the rear panel is set to the correct setting that prevails in the area to which the unit is shipped. However, if the FM DE-EMPHASIS / CHANNEL SPACE setting is not matched to the area where the unit is to be used, for instance, when you moved from area 1 to area 2 or vice versa, desired reception of AM / FM broadcasts is not expected. In this case, change the FM DE-EMPHASIS / CHANNEL SPACE setting in accordance with the area corresponding to the table. The FM DE-EMPHASIS is switched over at the same time.

- When changing the setting of the FM DE-EMPHASIS / CHANNEL SPACE switch, first disconnect the power cord of the amplifier, then reset the channel space switch, connect the power cord again, and turn the power on.

<table>
<thead>
<tr>
<th>Area</th>

**Controls and indicators**

- **POWER key**
  Switches the power ON/OFF

- **STANDBY indicator**

- **LEVEL MODE key**
  Press when adjusting the tone

- **LEVEL CONTROL keys**
  Press to adjust the tone.

- **BAND key**
  Press to switch the broadcast band

- **INPUT SELECTOR knob**
  Turn to select the input sources

- **VOLUME CONTROL knob**

- **PHONES jack**
  Used for headphone listening

- **LOUDNESS key**
  Press to enhance low frequencies

- **MUTING key**
  Press to mute sound temporarily.

- **SPEAKERS A/B keys**
  Press to select the A and/or B speaker systems

- **SRS 3D key**

- **TAPE 2 key**
  Press to monitor the sound being recorded.

- **Numeric keys**

- **AUTO/MANUAL key**
  Press to select the auto tuning mode.

- **DIRECT key**
  Press for direct station tuning based on numerical input.

- **MEMORY key**
  Press to preset a station in the memory.

- **P.CALL keys**
  Recalls preset stations.

- **TUNING keys**
  Press to tune broadcast stations.

---

**About the STANDBY indicator**

This unit has a STANDBY indicator. When the STANDBY indicator is lit, the unit consumes a small amount of power to preserve the memory. This is called STANDBY mode. This mode also lets you turn the power ON/OFF using the remote control.
Remote control unit

The remote control unit provided with the receiver can also control KENWOOD cassette decks, and CD player connected to the receiver through system control cords. For details of the controllable functions, refer to the instruction manuals of these components.

1. POWER key
2. BAND key
   Press to switch the broadcast band.
3. CALL keys
   Recalls preset stations
4. Play/pause key (▷ II) (CD)
5. Stop key (■) (CD)
6. Skip keys (◄, ►) (CD)
7. DISC SKIP key (CD)
   For use as the disc skip key of the multi-CD player.
8. Input selector keys
   Press to select the inputs
9. SRS 3D key
   Press for SRS 3D play
10. LEVEL MODE key
    Press when adjusting the tone.
11. TAPE A/TAPE B keys (Cassette decks)
12. Play keys (◄, ►) (Cassette decks)
13. Fast Forward/Rewind keys (◄, ►) (Cassette decks)
14. Stop key (■) (Cassette decks)
15. REC/ARM key (Cassette decks)
    When recording on TAPE B, puts the deck in record-pause mode after leaving a non-recorded blank of 4 seconds.
16. MUTING key
    Press to mute sound temporarily.
17. LOUDNESS key
    Press to enhance low frequencies.
18. VOLUME/LEVEL CONTROL keys
    Press to adjust the volume. If the LEVEL MODE key is pressed before these keys, these keys can also be used to adjust the tone.

Loading batteries

1. Remove the cover.
2. Insert batteries.
3. Insert two AA-size (R6 / SUM-3) batteries as indicated by the polarity marking.
4. Close the cover.

Operation procedure

When the STANDBY indicator is lit, the power turns ON when you press the POWER key on the remote. When the power comes ON, press the key you want to operate.

Approximate operating range

- When two operation keys on the remote control unit are pressed successively, press each key securely reserving an interval of more than 1 second for each press.

---

1. The supplied batteries are intended for use in operation checks. Therefore, their lives may be shorter than ordinary batteries.
2. When the remote-controllable distance gets shorter than before, replace both batteries with new ones.
3. Malfunction may occur if direct sunlight or the light of a high-frequency lighting fluorescent lamp enters the remote control light sensor. In such a case, change the system installation position to prevent the malfunction.
Playing music

1 Turn the power ON.

2 Select the SPEAKERS key setting.

3 Select the input source.

4 Play the selected source.

5 Adjust the volume.

A. B OFF
Sound is not output from the speakers. Use this setting for listening through headphones, etc.

A ON
Sound is output from the speakers connected to the SPEAKERS A terminals on the rear panel.

B ON
Sound is output from the speakers connected to the SPEAKERS B terminals on the rear panel.

A, B ON
Sound is output from the speakers connected to the SPEAKERS A and B terminals on the rear panel.

The input sources are switched in the following order:
1 TUNER (frequency display)
3 C
4 CD
5 TAPE 1 (*1)
6 TAPE 2

* If a KENWOOD MD recorder connected through the system remote control cord in the [SL16] mode, it is necessary to change the TAPE 1 input to MD input using the following procedure:
1 Select the input name to be changed.
2 Press and hold the AUTO/MANUAL key for more than 2 seconds.

The sound of input source cannot be listened to while TAPE 2 is ON.
Sound adjustment functions

Adjusting the tone and left/right volume balance

1. Select the tone mode to be adjusted.

   - LEVEL MODE

   Proceed to step 2 within 5 sec. (If more than 5 sec. have elapsed, press the LEVEL MODE key again.)

2. Adjust.

   - LEVEL CONTROL
   - To enhance (To decrease the left sound)
   - To disenhance (To decrease the right sound)

Each press of the key switches the mode as follows:

1. L--R--R - The mode for adjusting the volume balance between the left and right.
   - Indicates the center.
   - Indicates the balance setting.

2. BASS - The mode for adjusting the low frequencies.
   - Indicates the center.
   - BASS +4

3. TREBLE - The mode for adjusting the high frequencies.
   - Indicates the center.
   - TREBLE +2

To listen through headphones

1. Set both of the SPEAKERS keys to OFF.

2. Plug headphones.

3. Adjust the volume.

Compensating for low frequencies (LOUDNESS)
The LOUDNESS function is used to compensate for the low frequencies which are less audible during low-volume listening.

To cancel
Press the LOUDNESS key again.

To mute sound temporarily

Press again to return to the original volume.

To cancel
Press the MUTING key again.
SRS 3D (Sound Retrieval System 3-Dimension) stereo experience

The sound retrieval system is a signal processing system that produces a three dimensional sound stage. It does this by applying the most suitable processing to the sound signal on the basis of the human listening patterns. This permits real depth and a wide sound stage which is considered difficult to achieve with conventional 2 channel stereo. The “SRS” effect can be obtained from any stereo source i.e.; CD, Tape, Stereo Broadcast etc., the “SRS” effect can also be applied to recordings.

Please switch off SRS 3D sound field effects when listening to a tape recorded with sound field effects ON.

1. **Playback a favorite song.**

2. **Switch SRS 3D ON.**

Each press switches the function alternately:

1. "SRS 3D" lit up (SRS 3D ON)
2. "SRS 3D" extinguished (SRS 3D OFF)

The characters are scrolled to the left.

---

**Image of SRS 3D stereo sound**

- **Normal stereo sound**
  - Produces a "live" feeling (An atmosphere similar to that of a live concert.)
  - Clear sound imaging (Allowing you to locate the position of the instrument or person.)

- **SRS 3D stereo sound**
  - Depth reproduction (Allowing you to perceive the difference between near and far sounds.)
  - Expanded sound stage (Provides clear sound imaging over a vast area.)

Listening area (The area where you can hear a full stereo effect.)

Wide listening area (Provides a full stereo effect from almost any part of the room.)
To record a music source

1. Select the source to be recorded.
   - Select an input source other than TAPE 1.
2. Put the cassette deck in record-pause mode.
3. Play the source and start recording.

Copying tape (Tape dubbing TAPE 2 → TAPE 1)

1. Press the TAPE 2 key.
2. Select a source other than TAPE 1.
3. Play cassette deck 2 and start recording on cassette deck 1.

- For copying a tape using a double cassette deck, read the instruction manual of the double cassette deck.

Copying tape (Tape dubbing TAPE 1 → TAPE 2)

1. Select TAPE 1 with the INPUT SELECTOR control of the main unit.
2. Play the cassette deck connected to the TAPE 1 jacks and start recording of the cassette deck connected to the TAPE 2 jacks.

Regarding TAPE 2 (MONITOR)

A cassette deck or graphic equalizer can be connected to this unit's TAPE 2 (MONITOR) terminals. If you connect a graphic equalizer, turn the TAPE 2 key ON. If you connect a 3-head cassette deck, you can monitor the source sound, or the sound being recorded, while recording. Pressing the TAPE 2 key lets you compare the recorded sound and the source sound. Refer to the operating manual for the component you connected for further details.
Broadcast reception

Receiving broadcast stations

1 Select the TUNER input.

2 Select the broadcast band.

3 Select the tuning method.

4 Select a station.

The input sources are switched in the following order:

1. TUNER (frequency display)
2. PHONO
3. CD
4. VIDEO (VTR)
5. TAPE (R/TAPE)

- The last frequency tuned before is displayed.

Each press switches the band as follows:

1. FM
2. AM

Each press switches the tuning method as follows:

1. AUTO (auto tuning)
2. AUTO not lit (manual tuning)

- Usually, set the switch to AUTO (auto tuning).

Select manual tuning when noise interferes due to weak radio wave.
(The stereo broadcasting is received in monaural during manual tuning.)

For Auto Tuning: Press \( \) or \( \) once and the tuner automatically tunes to a receivable station.
For Manual Tuning: Press repeatedly until the frequency you desire is tuned. You can also tune by holding the button down.
Receiving radio stations by specifying its frequency

1 Select the TUNER input.

2 Select the broadcast band.

3 Specify the frequency.
   1 Press the DIRECT key.
   2 Enter the frequency of the desired station.

The input sources are switched in the following order:

- TUNER (frequency display)
- PHONO
- CD
- VIDEO
- TAPE (MD)
- AUX

Each press switches the band as follows:

- FM
- AM

Press the numeric keys according to the frequency to be tuned as shown below.

**AM10kHz/FM10kHz territories (U.S.A., Canada, etc.)**
- AM 810 kHz .... 8 1
- AM 1260 kHz .... 1 2 6
- FM 90 MHz ....... 9 0 0
- FM 102.5 MHz .... 1 0 2 5

**AM9kHz/FM5kHz territories (other countries)**
- AM 810 kHz .... 8 1 0
- AM 1260 kHz .... 1 2 6 0
- FM 90 MHz ....... 9 0 0 0
- FM 102.5 MHz .... 1 0 2 5 0

**FM DE-EMPHASIS/CHANNEL SPACE switch**

- If you make a mistake, the frequency display blinks for a few seconds. In this case, repeat step 3 from the beginning.
Storing radio stations in memory (Station preset)

1. Press the MEMORY key during receiving a station.

2. Select one of the preset numbers from 1 to 40.

Lights up (for 5 sec.)

Press the numeric keys in the following order:
- To store in "15" ... +10 5
- To store in "20" ... +10 +10 0

Example:
- To store "15" in "15", press +10 5.
- To store "20" in "20", press +10 +10 0.

Repeat steps 1 and 2 for each of the stations to be stored in memory.
You can store a combined total of up to 40 FM and AM stations.
If a station is already stored in a preset number, the previous memory is replaced by the new memory content.

Receiving a preset station

Press the numeric keys in the following order:
- To recall "15" ... +10 5
- To recall "20" ... +10 +10 0

If you make a mistake in entering the figure of 10, press the +10 key repeatedly until the original display is shown, then enter the correct number.

Receiving all preset stations in order

Press the P.CALL key.

When you press < key,.... 1 → 2 → 3 → 4 → 5 → 6 → 7 → 8 → 9 → 10
When you press > key,.... 1 → 2 → 3 → 4 → 5 → 6 → 7 → 8 → 9 → 10

If the key is held pressed, preset stations will be received successively for about half a second each.
**Operation to reset**

The microcomputer may fall into malfunction (impossibility to operate, erroneous display, etc.) when the power cord is unplugged while power is ON or due to an external factor. In this case, execute the following procedure to reset the microcomputer and return it to normal condition.

- Please note that resetting the microcomputer clears the contents stored in it returns it to the condition when it left the factory.

### Remote control unit

KENWOOD follows a policy of continuous advancements in development. For this reason specifications may be changed without notice.

Memory backup function

Please note that the following items will be deleted from this unit's memory if the power cord is disconnected from the AC outlet for approximately three days.

- POWER status (ON or OFF)
- System control mode setting (XS8 or XS88)
- Input setting
- Volume level
- Receiving band
- Frequency
For the U.S.A.

FCC WARNING
This equipment may generate or use radio frequency energy. Changes or modifications to this equipment may cause harmful interference unless the modifications are expressly approved in the instruction manual. The user could lose the authority to operate this equipment if an unauthorized change or modification is made.

NOTE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment may cause harmful interference to radio communications, if it is not installed and used in accordance with the instructions. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
— Reorient or relocate the receiving antenna.
— Increase the separation between the equipment and receiver.
— Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
— Consult the dealer or an experienced radio/TV technician for help.

For the U.S.A.

Note to CATV system installer:
This reminder is provided to call the CATV system installer's attention to Article 820-40 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical.
