

# klipsch heresy II

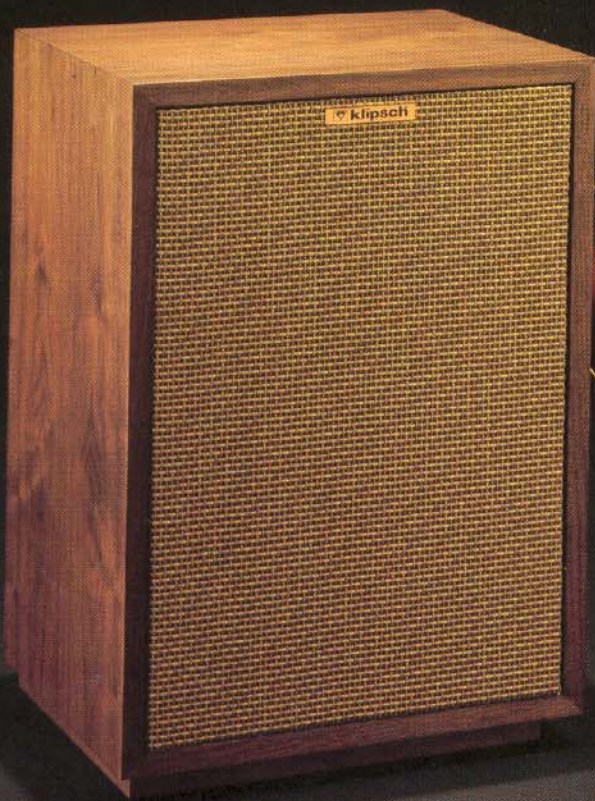

The KLIPSCH® HERESY II® is the latest generation of the speaker that has for years been the most widely acclaimed KLIPSCH model. The HERESY II is somewhat unique in its ability to deliver an exceptionally "big" sound from a relatively small cabinet.

The HERESY II has smooth frequency response, low distortion and high sensitivity to give you breath-taking dynamic range.

The cabinet, as beautiful as the

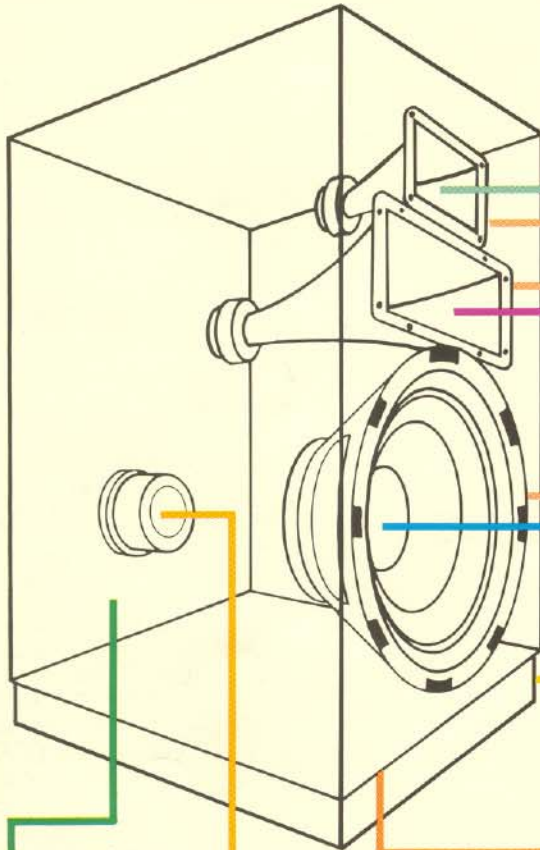

music it reproduces, takes up little floor space and allows for easy speaker positioning. And it's offered in a variety of beautiful wood veneers to complement the decor of your home.

Yes, inside and out, this is a most exceptional speaker system. One which will provide you with a lifetime of listening pleasure while reflecting your good taste in music and the art of its reproduction.

meeting the demands of  
audio today, setting the  
standards for audio's future.

Special foam inside the cabinet minimizes internal sound reflections and results in smoother frequency response.

The input panel of the HERESY II is built in conjunction with the crossover network of the system. Incoming electrical information is immediately sent to the proper driver. This input panel is placed low on the rear of the cabinet to eliminate unsightly, dangling speaker wires.

New KLIPSCH<sup>®</sup> designed high frequency horn/driver tweeter assembly handles more power, delivers wider bandwidth, and gives you smoother response. High frequencies sparkle with clarity. You'll feel as if you can touch the music while it is touching you.

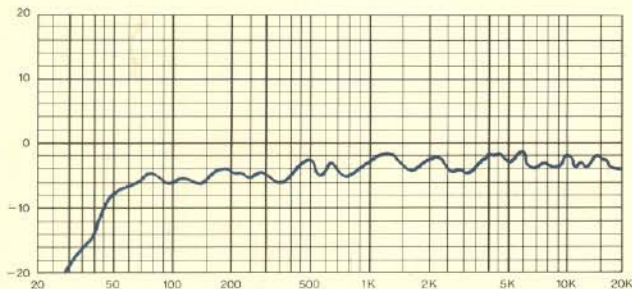

Many tests have proven that midrange frequencies are the most critical to the enjoyment of music. For the important midrange area, KLIPSCH engineers developed a special compression driver/horn assembly for rugged power handling capability, wide dynamic range and exceptionally smooth response. This midrange driver assists the HERESY II in delivering a most accurate, three dimensional stereo image.

The cabinet exterior of the HERESY II provides immediate evidence of construction quality. This cabinet is meticulously crafted from your selection of genuine wood veneers. Each finished pair is matched for color and grain structure of the wood. One tiny flaw and the pair is destroyed.

All components of the HERESY II are mounted to the front of the cabinet face. This eliminates the possibility of any defraction of sound by the cabinet and results in wide dispersion, smooth polar response, and a better stereo image.

The HERESY II's clean, tight bass response is provided by a KLIPSCH 12" (30.5 cm) woofer operating in a sealed enclosure. KLIPSCH engineers relied on proven principles combined with innovative technology to develop this woofer which is unparalleled for reliability.

The HERESY II is offered with your choice of optional riser bases – one that keeps the system parallel to the floor (for use in larger rooms) and one that "slants" the system upward (for use in smaller rooms) so that the sound is directed to you, the listener. A riser base is recommended if the HERESY II is positioned on a floor. The riser base lifts the system to the proper height for the best stereo effect and keeps it coupled to the floor for optimum bass response. (See front panel photo.)

On-axis frequency response. Measured at a distance of three meters. Zero equals 100 dB.

## Specifications:

BANDWIDTH: 50 Hz –  
20 kHz  $\pm$  3 dB

POWER HANDLING: 100  
watts maximum continuous  
ENCLOSURE TYPE: Sealed,  
three-way system

## DRIVE COMPONENTS:

K-76-K tweeter,  
K-53-K midrange,  
K-24-K, 12" (30.5 cm)  
woofer

WEIGHT: 37 lbs./16.8 kg

## DIMENSIONS:

Height: 21-3/8" (54.3 cm)  
Width: 15-1/2" (39.4 cm)  
Depth: 13-1/4" (33.7 cm)
