Integrated Amplifier | Amplificateur Intégré | Eingebauter Verstärker | Amplificatore Integrato | Geintegreerde versterker | Amplificador integrado | Интегрированный усилитель
WARNING
This equipment is not waterproof. To prevent a fire or shock hazard, do not place any container filled with liquid near this equipment (such as a vase or flower pot) or expose it to dripping, splashing, rain or moisture.

CAUTION
Before plugging in for the first time, read the following section carefully.
The voltage of the available power supply differs according to country or region. Be sure that the power supply voltage of the area where this unit will be used meets the required voltage (e.g., 230 V or 120 V) written on the rear panel.

WARNING
To prevent a fire hazard, do not place any naked flame sources (such as a lighted candle) on the equipment.

VENTILATION CAUTION
When installing this unit, make sure to leave space around the unit for ventilation to improve heat radiation (at least 30 cm at top, 10 cm at rear, and 10 cm at each side).

WARNING
Slots and openings in the cabinet are provided for ventilation to ensure reliable operation of the product, and to protect it from overheating. To prevent fire hazard, the openings should never be blocked or covered with items (such as newspapers, table-cloths, curtains) or by operating the equipment on thick carpet or a bed.

European model only

Information for users on collection and disposal of old equipment and used batteries

These symbols on the products, packaging, and/or accompanying documents mean that used electrical and electronic products and batteries should not be mixed with household waste.

For proper treatment, recovery and recycling of old products and used batteries, please take them to applicable collection points in accordance with your national legislation.

By disposing of these products and batteries correctly, you will help to save valuable resources and prevent any potential negative effects on human health and the environment which could otherwise arise from inappropriate waste handling.

For more information about collection and recycling of old products and batteries, please contact your local municipality, your waste disposal service or the point of sale where you purchased the items.

These symbols are only valid in the European Union.

For countries outside the European Union:
If you wish to discard these items, please contact your local authorities or dealer and ask for the correct method of disposal.
Thank you for buying this Pioneer product.

Please read through these operating instructions so that you will know how to operate your model properly. After you have finished reading the instructions, put them in a safe place for future reference.

Chapter 1: Before you start

What's in the box
Please confirm that the following accessories are in the box when you open it:
- Remote control (Except A-10)
- AAA/RE-RT3 dry cell batteries x2 (Except A-10)
- Power cord
- Warranty card
- Operating instructions (This document)

Note
- Illustrations featured in the Operating Instructions may have been modified or simplified for ease of explanation, and may therefore differ from the actual product appearance.
- All illustrations used here are mainly of the A-30.

Loading the batteries in the remote control (Except A-10)
1. Open the rear lid.

2. Insert the new batteries, matching the polarities as indicated inside the case.

3. Close the rear lid.

The batteries included with the unit have been provided to allow you check product operation and may not last long. We recommend using alkaline batteries that have a longer life.

WARNING
- Do not use or store batteries in direct sunlight or other excessively hot places such as inside a car or near a heater. This can cause batteries to leak, overheat, explode or catch fire. It can also reduce the life or performance of batteries.

Caution
- Incorrect use of batteries may result in such hazards as leakage and bursting. Observe the following precautions:
- When inserting the batteries, make sure not to damage the springs on the battery's + terminals.

Installing the amplifier
When installing this unit, make sure to put it on a level and stable surface.
- Don't install it in the following places:
  - on a color TV (the screen may distort)
  - near a cassette deck (or close to a device that gives off a magnetic field). This may interfere with the sound.
  - in direct sunlight
  - in damp or wet areas
  - in extremely hot or cold areas
  - in places where there is vibration or other movement
  - in places that are very dusty
  - in places that have hot furnaces or ovens (such as a kitchen)
- Do not mount the unit on a sofa or other objects or material with absorbent qualities, since sound quality may be adversely affected.

Using the remote control
The remote has a range of about 7 m at an angle of about 30° from the remote sensor.

Keep in mind the following when using the remote control:
- Make sure that there are no obstacles between the remote and the remote sensor on the unit.
- Remote operation may become unreliable if strong sunlight or fluorescent light is shining on the unit’s remote sensor.
- Remote controllers for different devices can interfere with each other. Avoid using remotes for other equipment located close to this unit.
- Replace the batteries when you notice a fall off in the operating range of the remote.
Connecting up

Chapter 2:

Connecting up

Making cable connections

Caution

- Before making or changing the connections, switch off the power and disconnect the power cord from the AC outlet.
- Connect the power cord after all the connections between devices have been completed.

Caution

- The SIGNAL GND terminal is provided to reduce noise when connecting the unit to components such as an analog turntable.
- Do not connect the PHONO (MM) terminals to any component other than a turntable; also, do not connect to a turntable equipped with built-in equalizer. An excessively high sound output may be produced, resulting in damage to your speakers or other devices.
- The units PHONO (MM) terminals are designed to be used with turntables equipped with MM (moving magnet) type cartridges. Turntables equipped with MC (moving coil) cartridges cannot be used.
- Make sure not to bend the cables over the top of this unit (as shown in the illustration). If this happens, the magnetic field produced by the transformers in this unit may cause a humming noise from the speakers.

Caution

- The units POWER AMP DIRECT terminals should never be connected to any other components connectors except PREAMP OUT.
- If your turntable has a grounding wire, secure it to the ground terminal on this amplifier.

Note

- When connecting a tape cassette deck, playback noise may be heard, depending on the installation location. This noise is caused by leakage flux from the amplifier's transformer. In this event, change the installation location, or move the deck farther from the amplifier.
- iPod is a trademark of Apple Inc., registered in the U.S. and other countries.

About “Bi-wiring”

This unit can be used with speakers that support bi-wiring. Be sure to connect the high-frequency and low-frequency connections correctly.

Caution

- During playback, be sure that both the SPEAKERS A button and SPEAKERS B button are set to ON (page 7).
- During playback, be sure that both the SPEAKERS A button and SPEAKERS B button are set to ON (page 7).
- Speaker system Right
- Speaker system Left
- Speaker system Right
- Speaker system Left
- A-30's rear panel
- Power cord (included)
- Turntable
- Tuner
- iPod dock, etc.
- CD recorder or tape deck
- Right
- Left
- Speaker system A
- Speaker system B
- Right
- Left

- The units POWER AMP DIRECT terminals should never be connected to any other components connectors except PREAMP OUT.
- If your turntable has a grounding wire, secure it to the ground terminal on this amplifier.

Note

- When connecting a tape cassette deck, playback noise may be heard, depending on the installation location. This noise is caused by leakage flux from the amplifier's transformer. In this event, change the installation location, or move the deck farther from the amplifier.
- iPod is a trademark of Apple Inc., registered in the U.S. and other countries.

About “Bi-wiring”

This unit can be used with speakers that support bi-wiring. Be sure to connect the high-frequency and low-frequency connections correctly.
Connecting up

Connecting speaker cables
1. Twist the cable cores.
2. Loosen the nut on the SPEAKERS terminal, and insert the speaker cable into the exposed hole in the terminal shaft.
3. Retighten the terminal nut.

Connecting audio cables
Connect the white plug to the left (L) jack, and the red plug to the right (R) jack. Be sure to insert the plugs fully into the jacks.

Using centralized control with other Pioneer components (Except A-10)
Multiple Pioneer components equipped with CONTROL IN/OUT jacks can be connected to the A-30V/A-20 unit, allowing centralized control of all components via the remote sensor on the A-30V/A-20. This also allows remote control of components not equipped with a remote sensor or installed in places where the component's remote sensor cannot be accessed.

Plugging in

Important
- When going on trips or otherwise not using the unit for an extended period, always disconnect the power cord from its outlet. Note that various internal settings will not be lost even if the power cord is disconnected from its outlet for an extended time.
- If it is necessary to detach the power cord, first be sure to press the STANDBY/ON button on the front panel of the unit so that the A-30V/A-20 is turned OFF, or the A-10 is in standby mode before detaching the cord.

Caution
- The use of a power cord other than the one provided will invalidate the warranty. Pioneer will not be responsible for any damage incurred. (The power cord provided with the model A-30) has a rated current capacity of 2.5 A, while the cord provided with the A-30V-A-10 has a rated current capacity of 10 A.
- Do not use any power cord other than the one supplied with this unit.
- Do not use the supplied power cord for any purpose other than that described below.

After you've finished making all the connections, plug the unit into an AC outlet.

**Note**
- For connections use a commercially available monaural mini plug cord (without resistor).
- When connecting the CONTROL IN/OUT jacks, commercially available audio cords must also be used to make analog connections. Merely connecting the CONTROL IN/OUT jacks alone will not allow proper system control.
- When a control cord is connected to the A-30V-A-20's CONTROL IN jack, the unit cannot be controlled by pressing the remote control (the A-30V-A-20's control is automatically disabled).

1. Plug the supplied power cord into the AC IN socket on the rear panel of the unit.
2. Plug the other end into an AC outlet.
Chapter 3: Controls and displays

Front panel

1. **STANDBY/ON**
   - Switches the amplifier between off and on.
   - When power is turned off, the power indicator in the center of the button will light.
   - On the A-30 model, this switches the amplifier between standby and on.

2. **STANDBY/AMP indicator**
   - When power is set to standby, the indicator lights red.
   - When the Auto Power Down (AMP) function is on, the indicator lights green (page 11).

3. **SPEAKERS A button/indicator**
   - Use this button to listen to the speaker system connected to SPEAKERS A terminals.
   - **On:** The indicator lights. Sound is heard from the speaker system.
   - **Off:** The indicator goes off. No sound is heard from the speaker system.
   - Set this position when listening with headphones.

4. **SPEAKERS B button/indicator**
   - Use this button to listen to the speaker system connected to SPEAKERS B terminals.
   - **On:** The indicator lights. Sound is heard from the speaker system (Sound will also be produced from the PHONES jack).
   - **Off:** The indicator goes off. No sound is heard from the speaker system.
   - Set this position when listening with headphones.

5. **LOUDNESS button/indicator**
   - Use when listening at low volume levels.
   - **On:** The indicator lights. Boosts low and high frequencies to give added punch to playback even at a low volume level.
   - **Off:** The indicator goes off. Should normally be left in this position.
   - This button does not operate when the DIRECT button is in the on position.
   - When sound volume is raised, the amount of change produced by the LOUDNESS circuit is reduced.

6. **Remote sensor (Except A-10)**
   - Receives the signals from the remote control (page 4).

7. **PHONES jack**
   - Use to connect headphones. No sound is produced when the POWER AMP DIRECT button is ON.

8. **DIRECT button/indicator**
   - **On:** The indicator lights. This button is set to ON sound signals are output directly, without being passed through the various adjustment circuits (BASS, TREBLE, BALANCE, LOUDNESS). This allows reproduction of the signals with greater fidelity, but it disables any settings made with the BASS, TREBLE, BALANCE or LOUDNESS controls.
   - **Off:** The indicator goes off. The signal passes through the various frequency-adjusting circuits. When the indicator is OFF, adjustments can be made with the BASS, TREBLE, BALANCE, and LOUDNESS controls.

9. **BASS tone control**
   - Use to adjust the low-frequency tone. The center position is the flat (normal) position. When turned to the right, low-frequency tones are emphasized; when turned to the left, low-frequency tones are deemphasized.
   - This button does not operate when the DIRECT button is in the on position.

10. **TREBLE tone control**
    - Use to adjust the high-frequency tone. The center position is the flat (normal) position. When turned to the right, high-frequency tones are emphasized; when turned to the left, high-frequency tones are deemphasized.
    - This button does not operate when the DIRECT button is in the on position.

11. **BALANCE control**
    - Should normally be left in the center position. Adjust balance if the sound is louder from one of the speakers.
    - If the right side is louder, turn toward the L (left) position, and if the left side is louder, turn toward the R (right) position.
    - This button does not operate when the DIRECT button is in the on position.

12. **VOLUME control**
    - Use to adjust the volume level. (Also allows adjustment of the headphone sound volume.)

13. **INPUT SELECTOR knob/indicators**
    - Turn the knob clockwise or counterclockwise so that the indicator lights for your desired input source. Turning the knob clockwise causes the “L” indicator to light. Turning counterclockwise causes it to be off.
    - When the remote control’s MUTE button is pressed to mute the sound, the indicator for the input source selected with the INPUT SELECTOR knob flashes.

14. **POWER AMP DIRECT button/indicator**
    - (A-30 only)
    - Press this button when the A-30 is to be used as a power amplifier (page 10).
Controls and displays

Rear panel

See pages 5-6 for details regarding connections.

1. GND (Turntable ground) terminal
   The ground terminal is designed to help reduce noise when a turntable is connected. It is not a safety ground.

2. SPEAKERS A terminals (Right channel)

3. SPEAKERS B terminals (Right channel)

4. SPEAKERS B terminals (Left channel)

5. SPEAKERS A terminals (Left channel)

6. AC IN jack
   Connect power cord to here and an AC wall socket.

7. PHONO (MM) IN terminals

8. TUNER IN terminals

9. SACD/CD IN terminals

10. AUX IN terminals

11. NETWORK IN terminals

12. RECORDER IN/OUT terminals

13. POWER AMP DIRECT IN terminals (A-30 only)
   When using the A-30 as a power amplifier, connect the pre-amplifier here (page 10).

14. CONTROL IN/OUT jack (Except A-10)
Remote control (Except A-10)

1. **STANDBY/ON**
   Switches the amplifier between standby and on.

2. **Input selector buttons**
   Press to select an input source. These select the component connected to the corresponding input on the rear panel.
   - When the A-30 is connected, the OPTION button is disabled.

3. **SACD PLAYER control buttons**
   Use to control Pioneer SACD player. (Cannot be used to perform playback/pause on the PD-39PD-39M/ES PD-29P /2 models.)

4. **NETWORK AUDIO PLAYER control buttons**
   Use to control Pioneer network audio player.

5. **LOUDNESS**
   Use to set the loudness circuit ON/OFF (page 7).

6. **MUTE**
   Mutes/mutes the sound.

7. **DIRECT**
   Press to access Direct listening (page 7).

8. **DIMMER**
   This button allows the illumination of the unit’s front panel indicators to be set in three levels (does not affect the STANDBY indicator).

9. **INPUT +/-**
   Use to change the inputs source. The source changes as below:
   SACD/CD → NETWORK → PHONO → TUNER → AUX → RECORDER → Return to the beginning.

10. **SPEAKERS A button/indicator**
    Use this button to listen to the speaker system connected to SPEAKERS A terminals.

11. **SPEAKERS B button/indicator**
    Use this button to listen to the speaker system connected to SPEAKERS B terminals.

12. **VOLUME +/-**
    Use to set the listening volume.

13. **APD**
    Use to set the Auto Power Down function to ON/OFF (page 11).
Chapter 4: Operation

Playback

1. Turn on the power of the playback component.
2. Turn power ON to the unit.
   - If the unit is in the standby mode, press the remote control's STANDBY/ON button.
3. Select the source you want to playback.
   - When using the A-30's remote control, the INPUT +/- button can be used to select the component.
   - When using the front panel controls, rotate the INPUT SELECTOR knob.
4. Start playback of the component you selected in step 1.
5. Adjust playback volume with VOLUME control.
6. Adjust the tone to your preference using the BASS and TREBLE controls, and LOUDNESS button.
   - If the DIRECT button has been set to ON, these controls are disabled.

Set the power to Standby

1. Press the remote control's STANDBY/ON button.

The next time you wish to turn on the power, press the remote control's STANDBY/ON button.

- In the case of the A30/A-30, if the front panel's STANDBY/ON button is pressed, the power will be turned off. In this case, if the power is off, pressing the remote control's STANDBY/ON button will not turn on the power. To turn on the power again, press the front panel's STANDBY/ON button.

Note

- If the power cord is disconnected when the unit is in the standby mode, the unit will turn off, but when the cord is then reconnected, the unit will not automatically turn on. After reconnecting the power cord, press the remote control's STANDBY/ON button to turn on the power.

When using the unit as a power amplifier

(A-30 only)

When a preamplifier is connected to the unit's POWER AMP DIRECT terminals, the unit can be used as a power amplifier.

1. Press the POWER AMP DIRECT button on the front panel of the unit.

The POWER AMP DIRECT indicator will light.

Caution

- When the POWER AMP DIRECT indicator is lighted, operations change as follows:
  - The unit's front-panel VOLUME, BASS, TREBLE, and BALANCE controls are disabled. These adjustments are controlled by the component connected to the unit's POWER AMP DIRECT terminals.
  - When the POWER AMP DIRECT indicator is lighted, sound volume from the A-30 will automatically be set at its maximum output. When using this unit as a power amplifier, check the output level of the component connected to the POWER AMP DIRECT terminals and set it to a low level as appropriate before turning on the POWER AMP DIRECT indicator. If the sound volume of the component connected to the POWER AMP DIRECT terminals is initially set to a high output level, loud sound may be output when the POWER AMP DIRECT indicator lights.
  - Sound is not produced from the PHONES jack and RECORDER OUT terminals.
  - For more information, consult the operating instructions for the component connected to the A-30's POWER AMP DIRECT terminals.
Making an audio recording

You can make an audio recording from any audio source connected to the amplifier.

1. Select the source you want to record.
2. Start recording, then start playback of the source component.

To set for automatic standby status (Auto Power Down)

When this condition is set, if no input signal is detected for 30 minutes, the unit will automatically enter standby status.

1. If the unit's power is ON, hold the unit's front-panel DIRECT button and LOUDNESS button depressed simultaneously for three seconds.

When this condition is set to ON, the STANDBY/APD indicator on the unit's front panel will light green. Press the buttons again to disable the setting.
- This condition can also be set by means of the APD button on the A-30's remote control.
- The factory default setting is ON.

Note
- Depending on the device connected, excessive noise produced by the device may be interpreted as an audio signal, thus preventing the Automatic Power-Down function from operating.

Restoring all the settings to the factory default settings

1. When power is in standby mode, hold the front-panel's DIRECT button and SPEAKERS A button depressed simultaneously for five seconds.
2. Turn power ON to the unit.
Chapter 5: Additional information

Troubleshooting

Incorrect operations are often mistaken for trouble and malfunctions. If you think there is something wrong with this component, check the points below. Sometimes the trouble may lie in another component. Investigate the other components and electrical appliances being used. If the trouble cannot be rectified even after exercising the checks listed below, ask your nearest Pioneer authorized service center or your dealer to carry out repair work.

- If the unit does not operate normally due to external effects such as static electricity disconnect the power plug from the outlet and insert again to return to normal operating conditions.

<table>

Cleaning the unit

- Use a polishing cloth or dry cloth to wipe off dust and dirt.
- When the surface is dirty, wipe with a soft cloth dipped in some neutral cleaner diluted five or six times with water, and wrung out well and then wipe again with a dry cloth. Do not use furniture wax or cleaners.
- Never use thinners, benzine, insecticide sprays or other chemicals on or near this unit, since these will corrode the surface.
**Specifications**

**Amplifier section**
