SAFETY INSTRUCTIONS

Explanation of Graphical Symbols

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert you to the presence of uninsulated dangerous voltage within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert you to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

1. Read Instructions - All the safety and operating instructions should be read before the appliance is operated.
2. Retain Instructions - The safety and operating instructions should be retained for future reference.
3. Head Warnings - All warnings on the appliance and in the operating instructions should be adhered to.
4. Follow Instructions - All operating and other instructions should be followed.
5. Water and Moisture - The appliance should not be used near water - for example, near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement, or near a swimming pool, etc.
6. Carts and Stands - The appliance should be used only with a cart or stand that is recommended by the manufacturer.

PORTABLE CART WARNING

7. Wall or Ceiling Mounting - The appliance should be mounted to a wall or ceiling only as recommended by the manufacturer.
8. Ventilation - The appliance should be situated so that its location or position does not interfere with its proper ventilation. For example, the appliance should not be situated on a bed, sofa, rug, or similar surface that may block the ventilation openings; or placed in a built-in installation, such as a bookcase or cabinet that may impede the flow of air through the ventilation openings.
9. Heat - The appliance should be situated away from heat sources such as radiators, stoves, or other appliances that produce heat.

APPLICABLE FOR USA, CANADA OR WHERE APPROVED TO THE USAGE

CAUTION - TO PREVENT ELECTRIC SHOCK, MATCH WIDE BLADE PLUG TO WIDE SLOT, INSERT FULLY.

ATTENTION - POUR EVITER LES CHOCS ELECTRIQUES, INTRODUIRE LA LAME LA PLUS LARGE DE LA FICHE DANS LA BORNE CORRESPONDANTE DE LA PRISE ET POUSSER JUSQU AU FOND.

10. Power Source - The appliance should be connected to a power supply only of the type described in the operating instructions or as marked on the appliance.
11. Power-Cord Protection - Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the appliance.
12. Cleaning - The appliance should be cleaned only as recommended by the manufacturer.
13. Nonuse Periods - The power-cord of the appliance should be unplugged from the outlet when left unused for a long period of time.
14. Object and Liquid Entry - Care should be taken so that objects do not fall into and liquids not spilled into the inside of the appliance.
15. Damage Requiring Service - The appliance should be serviced by qualified service personnel when:
   A. The power-supply cord or the plug has been damaged; or
   B. Objects have fallen, or liquid has been spilled into the appliance; or
   C. The appliance has been exposed to rain; or
   D. The appliance does not appear to operate normally or exhibits a marked change in performance; or
   E. The appliance has been dropped, or the cabinet damaged.

POOR, DULL SOUND ARE THE HEADS DIRTY? HEADS MAGNETIZED FROM LONG
USAGE WITHOUT DEMAGNETIZING? ARE THE PINCH ROLLER AND THE CAPSTAN DIRTY? CLEAN WITH PURE ALCOHOL, Q TIP COTTON BUDS OR A TAPE DECK CLEANING KIT. DEMAGNETIZE THE HEADS WITH A HAND HELD DEMAGNETIZER. DO NOT USE ABRASIVE DRY CLEANERS!

DISTORTED BASS OVERLOADING SMALL SPEAKERS?
TOO LOUD VOLUME CLIPPING YOUR AMPLIFIER?

HUM IN SYSTEM AC CORD, VIDEO, DIGITAL AND AUDIO CABLES TOUCHING?
THE AC CORD SHOULD BE SEPARATE FROM SIGNAL CABLES SIGNAL CABLES LAYING NEAR A LARGE POWER TRANSFORMER, SUCH AS IN A POWER AMPLIFIER?
DEFECTIVE OR UNSHIELDED SIGNAL CABLES?

OVERHEATING IS A COMPONENT STACKED ON THE AMPLIFIER?
IS THE AMPLIFIER ENCLOSED IN A SMALL SPACE? A MINIMUM OF 3 TO 4 (~8-10 CM) CLEARANCE IS NEEDED ABOVE THE AMPLIFIER IN A SYSTEM. DO NOT STACK COMPONENTS ON THE AMPLIFIER. AN AMP NEEDS TO BREATHE FREELY TO STAY COOL.

POOR RECEPTION IS THE ANTENNA CONNECTED PROPERLY? IS THE FM STATION DISTANT?
IS THE AMPLIFIER MOUNTED AS HIGH AS POSSIBLE?
IS THE ANTENNA ORIENTED FOR BEST RECEPTION?
IS THE AMPLIFIER MOUNTED AS HIGH AS POSSIBLE?
IS THE ANTENNA ORIENTED FOR BEST RECEPTION?

NOISY RECEPTION IS THE ANTENNA CONNECTED PROPERLY? IS THERE A LARGE ELECTRICAL MOTOR OR COMPRESSOR NEAR THE TUNER OR ANTENNA? NOISE IS EASILY RECEIVED IN THE AM BAND. ADJUST THE ANTENNA FOR BEST RECEPTION AND MINIMUM INTERFERENCE.

CONTINUED PROBLEMS? ASK YOUR ROTEL hi fi AUTHORIZED DEALER FOR HELP.
one until the problem reappears. If you are unable to locate the source of the problem then you should consult your ROTEL hi F Authorized Dealer for advice or service.

A FINAL WORD FROM ROTEL

Even though some people consider 25 watts per channel a modest power output we feel that this is a superb amplifier for smaller rooms or very efficient speakers. We have designed this amplifier for high performance using test equipment and the human ear. We believe that extensive listening and test equipment is both useful in the design of audio electronics. This is time consuming but we feel that the music benefits from this care and attention to detail. We realize that there are many choices available and we thank you again for choosing our RA 921 stereo integrated amplifier to amplify your music. Enjoy the music!

SPECIFICATIONS:

Rated Power (20-20 kHz < 0.03%, 8 ohms) 25 Watts
DiN Output (1 kHz, 1% THD, 4 ohms) 35 Watts
Total Harmonic Distortion (20-20 kHz, 8 ohms) < 0.03%
Intermodulation Distortion (60 Hz: 7 kHz, 4:1) < 0.03%
Signal to Noise ratio, all inputs, IHF A ≥ 96 dB, phono 78 dB
Phono Sensitivity, Input Impedance 2.5 mV, 47 kOhms
Phono Frequency Response 20-20,000 ± 1.5 dB
Amplifier Frequency Response 10-100,000 Hz +1 dB, -3 dB
Tone Control
Bass ± 6 dB @ 100 Hz
Treble ± 6 dB @ 10 kHz
Power requirement 115 volts 60 Hz or 230 volts 50 Hz
Power consumption 180 watts
Dimensions, W x H x D mm 440 x 92 x 304 inches 17.38 x 3.63 x 11.96
Weight (net) 4.8 kg, 10.56 Lb.

All specifications are accurate at the time of printing. Rotel reserves the right to make improvements without notice.

SYSTEM TROUBLESHOOTING HINTS

NO POWER IS THE AC CORD CONNECTED TO A SWITCHED AC OUTLET?
IS THE SWITCHED AC OUTLET TURNED ON?
CHECK THE POWER FUSE FOR THE AC OUTLET.

NO SOUND CORRECT INPUT SELECTED? IS THE AMPLIFIER TURNED ON?
IS THE AMPLIFIER CONNECTED PROPERLY?
ARE THE SPEAKER WIRES CONNECTED PROPERLY?

NO BASS IS THE SUBWOOFER AMPLIFIER TURNED ON?
IS THE POWERED SUBWOOFER TURNED ON?
ARE THE WOOFERS IN YOUR SPEAKERS DAMAGED?
ARE THE SPEAKERS WIRED CORRECTLY?

IS THE DISC SEVERELY WARPED?
IS THE DISC SEMI-TRANSPARENT OR POORLY MADE WITH VISIBLE PIN HOLES?

A WORD FROM ALL OF US AT ROTEL

We thank you for purchasing one of our RA 921 stereo integrated amplifiers. We have been designing and manufacturing high quality, high performance audio electronics for more than 35 years. Rotel’s passion for good sound and our love of music are well known worldwide. This integrated amplifier was designed to offer lifelike sound and is a natural extension of our love for music. We believe that the music played through this integrated amplifier will be a source of enjoyment to you for many years to come. We have designed this amp to be durable; easy to use and to have high fidelity to the original sound.

Please read this owners manual to ensure that your amplifier is properly installed and able to offer optimum performance. We appreciate being a part of your life.

FEATURES

This stereo integrated amplifier has been designed for high performance. It has symmetrical circuit path, utilized to ensure absolutely identical timing integrity between the two channels of the amplifier. The power supply derives from a ROTEL designed power transformer. We also utilize ROTEL custom designed capacitors to improve the speed and damping factor of the amplifier. We believe in highly regulated power supplies and build these into all of our products. We feel the extra expense of building in an excellent power supply is worthwhile because it is good for the music.

INSTALLATION

Please place the unit on a DRY, level surface away from direct sunlight. Avoid placing objects on top of the RA 921 that will block the cooling vents, as they may cause the amplifier to overheat. If the amplifier is mounted inside a cabinet, please be certain that there is adequate airflow to ensure proper cooling. Do not allow water or objects to fall into the amplifier, as these will damage the circuitry. Avoid installing the amplifier in a location where excessive humidity, vibration or moisture will be a problem. We recommend installing the amplifier in furniture designed to house Hi Fi components. This will allow the amplifier to be on a separate shelf with nothing stacked on top of it. This will minimize heat and potential interference from other components in your system. Component furniture will also reduce or suppress vibration and all audio components will provide improved sound when free from vibration. Ask your ROTEL hi F Authorized Dealer for advice about component furniture and proper installation of audio components.

ELECTRICAL REQUIREMENTS AND CLEANING

This amplifier is designed to work on AC voltage and the correct voltage is displayed on the Back Panel. Do not attempt to operate the amplifier on incorrect voltage as this will damage the circuitry and will void your warranty. If you are in doubt about the correct voltage for this amplifier we suggest that you consult your local electrical authority or service provider for advice or service.

Please read this owners manual to ensure that your amplifier is properly installed and able to offer optimum performance. We appreciate being a part of your life.
There is NO user serviceable part inside the RA 921. Please do not open the cabinet, as this will expose you to the risk of potentially dangerous high voltage and the risk of shock. This could also damage the circuits and void your warranty.

FRONT PANEL CONTROLS

We have designed this integrated amplifier to be easy to use. The controls are simple but comprehensive. The POWER button will turn the amplifier ON and OFF. Push it in and the amplifier will turn ON. The POWER indicator light will illuminate at the same time. If you push the POWER button again the amplifier will go OFF and the power indicator light will extinguish.

We have included a speaker disconnect function in the HEADPHONE jack on this amplifier. When headphones are plugged into the front panel headphone jack, the speakers are automatically disconnected. If you have headphones with a 3.5 mm mini plug you should ask your ROTEL hi Authorized Dealer for an adapter plug to convert them for use with the headphone jack on the RA 921.

To adjust the bass and treble content of the music, please use the front panel BASS and TREBLE controls. Turning the BASS or TREBLE controls to the right will increase the bass or treble. Turning the controls to the left will decrease the bass or treble.

The VOLUME control will allow you to turn the LEFT (L) and RIGHT (R) channels of music up or down in level at the same time. Rotation clockwise will increase the volume, rotation counterclockwise will decrease the volume. Adjust the BALANCE by turning it left or right, to shift the apparent center of the image or to center the sound from an out of balance signal.

The MONITOR selector switch will allow you to choose the source (normal operation) or to listen to a recording during playback. If you have a 3-head cassette deck, 3-head reel to reel tape deck or a DAT recorder capable of reading and writing at the same time, the MONITOR switch will allow you to immediately compare the source to the recording in progress.

The FUNCTION selector switch will select the source that you wish to hear. We have provided inputs for PHONO, CD, TUNER, and AUX.

BACK PANEL CONNECTIONS

The back panel has INPUT, OUTPUT and SPEAKER terminals for connecting source components and speakers in your stereo system. The INPUTS are clearly labeled. The LEFT and RIGHT channels are clearly designated. Please be certain that the LEFT channel and RIGHT channel connections are not reversed. This will not harm anything but it will make the orchestra sound backwards for classical music fans.

AUX will be ideal for the connection of a stereo TV monitor with audio output jacks, a DVD player, a hi fi video tape recorder, a Laser Disc player, a CD-ROM or DVD ROM drive. The CD and TUNER connections are clearly labeled for your convenience. PHONO connections are for a moving magnet (MM) phono cartridge. A ground terminal is included for your turntables phono cable to minimize hum in the phono signal. The phono section is designed for use with a moving magnet phono cartridge. Please do not connect a CD player, tape deck or other line level component to this input.

The TAPE connections have IN and OUT connections. These are to send a signal to (OUT) the recorder and then to receive a signal back from (IN) the recorder. Check all connections and read the owners manual for your recorder if you are in doubt about the labels.

The SPEAKER terminals will accept one pair of speakers. Speakers with rated impedance of 4 to 8 ohms will work well with the RA 921. Speakers rated for higher than 8 ohms impedance will also work well but these are not very common. You may connect the speakers with bare wire or banana plugs. (Non CE mark models) Please be certain to observe the correct polarity of the wires as well as the left and right channel connections. The RED (+) speaker terminals are to be connected to the RED or POSITIVE terminals on your speakers. The BLACK (-) speaker terminals are to be connected to the black or negative terminals on your speakers. If you make these connections incorrectly you will have a vague stereo image and very little bass response from your speakers.

If you are in doubt about the sound when listening then you should reverse the positive and negative connections on the back of one speaker only. If the stereo image becomes more specific and the apparent bass response improves, the speaker connections should be rechecked to ensure correct connection. You may also confirm this by placing the speakers face to face 75 mm apart (~3") and playing music with strong bass content as a source. The connection that has the most bass output is the correct connection. When connected in this way, the incorrect connection will have very little sound output as each of the two speakers will attempt to cancel the sound the other is making due to the opposite polarity and movement of the drivers.

If you connect your speakers with bare wire, strip approximately 1 1/2 mm (~1/2") of the insulation from the end of the wire and connect to the terminal of the amplifier by turning it around the center post of the speaker terminal. The speaker terminal knob should be turned counterclockwise to extend the terminal for connecting. When you have wrapped the wire around the post, tighten the speaker terminal by turning the knob clockwise to grasp the wire FIRMLY.

Ensure that NO LOOSE WIRE is outside the terminal housing. Repeat this operation for all the terminals. If you use banana plugs they may be connected to the end of the speaker terminals by pushing them into the holes provided.

HUM AND NOISE IN A STEREO SYSTEM

In any high fidelity stereo installation it is possible for noise to be created by the physical location of some of the components. If your system has hum or excessive noise it is possible to diagnose this before trying to have repairs made to a properly functioning component. If the system only hums with one source component then it should be unplugged from the system. Turn the VOLUME down or turn the POWER off before you unplug the suspected component.

If the system still hums after the suspected component has been removed, you may require service. First though, you should disconnect all the other components, except the speakers. If there is no hum after this, something in the system is either in need of physical relocation or repair. Connect the components one by one until the hum returns.
