OPERATING INSTRUCTIONS
MODE D’EMPLOI
BETRIEBSANLEITUNG
MANUAL DE INSTRUCCIONES
ISTRUZIONI PER L’USO
We are grateful for your choice of this Sansui high fidelity product. Before you operate it we suggest that you read this booklet once through carefully, familiarizing yourself with the important precautions, operational procedures and every one of the product's many features. It will help to ensure that you will avoid possible damage and that the product's superb performance will be yours to enjoy for many years to come.

Precautions

* Bear in mind the following points.

**Power plug**
When disconnecting the power cord from the power outlet, always take hold of the plug, and not the wire, and pull free. Never connect or disconnect the power plug with wet hands since you may receive an electric shock.

**Power Line Voltage and Frequency**
This unit's power line voltage and frequency are set to correspond to the values enforced at the destination area before the unit leaves the manufacturing plant. This is usually no need, therefore, to make any changes. Nevertheless, if after purchasing the unit you move to an area where a different voltage and frequency are used, make sure that the switches on the unit's rear panel are set to their proper positions. Incorrect setting of the power line voltage is extremely dangerous. Moreover, if the power line frequency is set improperly, the correct time will not be displayed. For details, contact the dealer from whom you purchased your unit or your nearest SANSUI Service Station.

- No power line frequency selector switch is provided on units destined for Europe.

**Do not remove the case and bottom panel**
Any inspections or adjustments inside the unit may lead to malfunctions and electric shocks. Do not touch any of the inside parts. SANSUI's warranty is not effective if a deterioration in the unit's performance results from remodelling inside.

**Installation precautions**
Do not install the unit in any of the following locations since this may result in a deterioration in performance or malfunction:
- Locations exposed to direct sunlight or near objects radiating heat such as heating appliances.
- Locations exposed to moisture or humidity.
- Locations with poor ventilation exposed to dust and dirt.
- Locations which are unstable and not perfectly flat or which are susceptible to vibration.
- On top of a high power output amplifier, audio components or any other product which radiates heat.

**Do not wipe with thinners**
Wipe the panels and case from time to time with a soft cloth. Using any kind of thinner, alcohol or volatile liquid will mar the surface, cause blotching on the exterior and erase the markings and should therefore be avoided.

Do not use insecticide sprays in the vicinity.
Connections

* Mains plug may vary to some extent depending on sales area, local laws and regulations.

Precautions with Connections
* The combined capacity of the three AC outlets on the rear panel is 700 watts. Connecting components whose power consumption exceeds this capacity is extremely dangerous. Always check the power consumption rating before connection.
* The timer cannot be used with a cassette deck which is not provided with a timer start (stand-by) function.

NOTE: Depending on the sales area, the shape of the AC outlets and their capacity may differ.

For the United Kingdom only

Important
The wires in this mains lead are coloured in accordance with the following code:
Blue: Neutral
Brown: Live
If the colours of the wires in the mains lead of this equipment should not correspond to the coloured markings identifying the terminals in your plug, proceed as follows:
The wire which is coloured blue must be connected to the terminal which is marked with the letter 'N' or coloured black.
The wire which is coloured brown must be connected to the terminal which is marked with the letter 'L' or coloured red.

Ensure that your equipment is connected correctly. If you are in any doubt, consult a qualified electrician.

For equipment purchased outside the U.K. with a "EUROPEAN" two-pin mains plug, the plug should be removed and connections made in accordance with the above instructions. Ensure also that the equipment is properly adjusted to 240 volts operation. If you are in any doubt, consult a qualified electrician, or our Service Agent in the U.K.

AC outlet on the rear panel accepts AC power plug "BULGIN R772" or equivalent.
Panel information

1 OUTLET CONTROL Switches
These switches are used to turn ON and OFF the three rear panel AC outlets.
OFF: This sets the AC outlets OFF regardless of the time.
AUTO: This is depressed when the unit is being used as an ON/OFF timer or sleep timer.
ON: This sets the AC outlets ON regardless of the time.

2 OUTLET ON Indicator
This lights when the three rear panel AC outlets are ON.

3 Time Display
This normally displays the time in minutes and hours:
* When the unit’s power plug is connected to the AC outlet initially or when the power is restored after a power failure, the power failure display function is activated and the display repeatedly flashes. Normal operation resumes once the time is set.

4 FUNCTION Switch
COUNTER: Set here to use the unit in the counter mode. The display changes to indicating the minutes and seconds.
CLOCK/TIMER ADJ.: Set here to set the time.
CLOCK: The switch is normally kept at this position. The time is indicated on the time display.
SLEEP: Set here for sleep timer time settings.

5 TIMER SET Switches
ON: The ON time of the ON timer is set using the display switch with this switch in the depressed position.
OFF: The OFF time of the OFF timer is set using the display switch with this switch in the depressed position.

6 Display Switches
These switches function as the time setting switches when the FUNCTION switch has been set to the CLOCK/TIMER ADJ. or SLEEP position.
* When the FAST switch is depressed, the time is advanced rapidly at about 1 hour every second.
* When the SLOW switch is depressed, the time is advanced slowly at about 2 minutes every second.
* When the FAST switch is depressed with the REVERSE switch in the depressed position, the time is reversed rapidly at about 1 hour every second.
* When the SLOW switch is depressed with the REVERSE switch already pushed, the time is reversed in units of about 2 minutes each second.
* The REVERSE switch does not work when the FUNCTION switch has been set to the SLEEP position.

When the FUNCTION switch has been set to the COUNTER position, the switches function as follows:
* * When the RESET switch is depressed, the display is reset to “0:00.”
* Every time the START/HOLD switch is depressed, the counter start and hold modes are switched alternately.
* When the THE CHECK switch is depressed, the counter display changes from minutes and seconds to hours and minutes for as long as the switch is kept depressed.
For instance, when the display is 1 hr 23 min 40 sec:
Minutes and seconds display: 3:40
Hours and minutes display: 1:23

7 SECOND CHECK/RESET Switch
* When this switch is depressed with the FUNCTION switch at CLOCK/TIMER ADJ., the minutes and seconds are displayed and the seconds are set to “00.” This is used for setting the present time.
* When the FUNCTION switch is at CLOCK and this switch is depressed, the display changes from the hours and minutes display to the minutes and seconds display for as long as the switch is kept depressed.
For instance, when the display is AM 10 hr 30 min 15 sec:
Hours and minutes display: AM 10:30
Minutes and seconds display: 0:15

* The photos and illustrations show a unit with a silver panel.
Operating procedures

Setting the Present Time
Use the radio or TV time signal to set the present time.
1. Set the FUNCTION switch to CLOCK/TIMER ADJ.
2. Keep depressing the SECOND CHECK/RESET switch, set the seconds to “00,” wait for the time signal and release the switch as soon as the signal is heard. The display changes to the hours and minutes but the second count now starts.
3. Now set the hours and minutes using the display switches. This unit’s time is based on the 12-hour system and so take care with AM and PM.
4. Return the FUNCTION switch to the CLOCK position.

ON/OFF Timer
This unit can be used to switch on the components connected to it at the desired time and switch them off at the desired time. Once set, the operation is repeated every day.
1. Depress the ON outlet control switch.
2. Switch on the power to the components connected to the unit and adjust them.
3. Set the FUNCTION switch to CLOCK/TIMER ADJ.
4. Set the ON time using the display switches while keeping the ON timer set switch in the depressed position.
5. Set the OFF time using the display switches while keeping the OFF timer set switch in the depressed position.
6. Depress the OFF outlet control switch. This switches off the power to the connected components.
7. Return the FUNCTION switch to the CLOCK position.
8. Depress the AUTO outlet control switch. The power is supplied to the components at the ON time. The power is switched off at the OFF time.
   * When the ON and OFF timer set switches are depressed, the ON and OFF times appear on the display and so can be checked.
   * Keep the ON or OFF outlet control switch depressed when the timer is not being used as a timer.

Sleep Timer
The sleep timer functions to switch on the components at the set time and then switch off the power automatically after the set time range has elapsed. Any time can be set in a range up to 1 hour 59 minutes in minute units.
This function is convenient for listening to music before falling asleep.
1. Depress the ON outlet control switch.
2. Switch on the power of the components connected to the unit and adjust them.
3. Set the FUNCTION switch to SLEEP. The display now indicates the hours and minutes of the sleep timer.
4. Set the sleep timer using the display switches. The displayed time is counted down while the switch is depressed.
5. Return the FUNCTION switch to CLOCK and depress the AUTO outlet control switch.
6. Once the set time elapses, the power to the connected components is switched off.
   * If the set times of the sleep timer and ON/OFF timer are shifted, for instance when using the unit as a sleep timer at night and as an ON/OFF timer in the morning, you can listen to music.
   * The sleep timer takes precedence when the sleep timer and ON/OFF timer set times overlap.
   To release the sleep timer in order to set the ON/OFF timer from the OFF mode, return the sleep time to “0:00” using the display switches.
   * The sleep timer function works only once and is released when the sleep time elapses.

Timer Counter
The unit can be used as a counter up to a maximum of 1 hr 59 min 59 sec. When recording tapes, you can easily find out the remaining time on the tape by subtracting the time elapsed from the tape’s total time.
1. Set the FUNCTION switch to COUNTER. The display shows the minutes and seconds.
2. Depress the START/HOLD display switch so that the counter display is held.
3. Depress the RESET display switch. The display is reset to “0:00” and the preparations are complete.
4. When the START/HOLD display switch is depressed, the counter starts; when depressed again, it is held. Depress the switch again to resume the count.
   * The display will return to “0:00” if the RESET display switch is depressing during a count operation.
   * If the TIME CHECK display switch is depressed when the count time has exceeded 10 minutes, the display changes to show the hours and minutes.
Rack mounting

When mounting this unit in an audio rack, use the accessory mounting fixtures and proceed as follows:

1. Align the two mounting fixtures with the width of the unit and attach them to the rack with the wood screws.
2. Fit the unit into the mounting fixtures.
3. Use the accessory clamp to hold the unit's power cord so that it does not hang loose, peel off the back paper and affix to the shelf.
