SERVICE BULLETIN
For
MODEL 222C STEREO AMPLIFIER

SPECIFICATIONS

Table with specifications for Model 222C Stereo Amplifier, including maximum power output, distortion, frequency response, and power consumption.

\* All H. H. Scott amplifiers and preamplifiers incorporate a sharp cutoff filter (12 db. or sharper per octave) which becomes fully operative below 20 cycles.

GENERAL SERVICE NOTES

1. Check the tubes, particularly those in the power output stage and the rectifier every year. If the tubes are outside the manufacturer's ratings or show gas, they should be replaced. Gassy tubes may damage other components of the circuit.
2. When the amplifier is being checked yearly, clean the tubes of dust so that they may radiate their heat more effectively.
3. If at any time the hum or noise increases noticeably, check the power tubes. This symptom is often an indication of gassy tubes.
4. If the amplifier blows fuses frequently, check the line voltage. If it rises above 125 volts, drop the line voltage by means of an auto-transformer or place a voltage regulator transformer between the amplifier and the line. If the line voltage is correct, check the amplifier itself. Do not use fuse sizes other than the fuse size specified.
5. D.C. Balance Adjustment:

Equipment Needed - Oscilloscope and/or AC VTVM, 16 ohm resistive load of adequate wattage (some wirewound resistors have considerable residual inductance and these should be avoided).

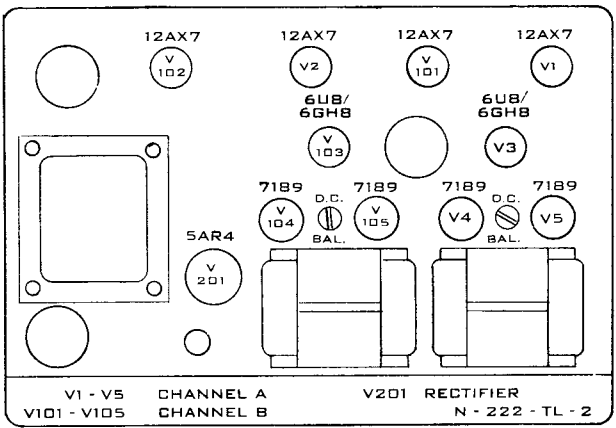

The balance pot for each output stage is located between the output tubes for that stage. These controls should be adjusted when the output tubes age appreciably or are replaced. To set these controls use the following procedure:

- (a) Connect the 16 ohm resistor across the output terminal of the channel under test.
- (b) Connect the oscilloscope and/or VTVM across the resistor, and turn the horizontal selector of the scope to "LINE".
- (c) Remove the phase inverter tube 6U8/6GH8 of the output stage under test.
- (d) Adjust the proper D.C. Balance Control for a minimum 120 cycle response on the scope or minimum reading on the AC VTVM.
- (e) Repeat the entire procedure for the other amplifier output stage.

6. Tests can be performed to insure that the unit meets or exceeds the specifications outlined previously. Only use parts and tubes specified by H. H. Scott, Inc. The use of non-standard parts or tubes will preclude obtaining the performance stated in the specifications.

STEREO SELECTOR SWITCH	
POSITION	FUNCTION
1.	BALANCE "A"
2.	BALANCE "B"
3.	MONOPHONIC RECORDS
4.	STEREO
5.	REVERSE STEREO
6.	CHANNEL "A"
7.	CHANNEL "B"

INPUT SELECTOR SWITCH	
POSITION	FUNCTION
1.	PHONO
2.	TUNER
3.	EXTRA

EQUALIZATION SWITCH	
POSITION	FUNCTION
1.	RIAA - NAB - ORTHO
2.	NAB TAPE

REVISIONS	DATE	BY	REASON
1	10/19/61	J.C.	CHANGED PER ECO 167
2	10/19/61	J.C.	REVISOR PER ECO 167
3	10/27/61	J.C.	REVISOR PER ECO 167
4	11/2/61	J.C.	REVISOR PER ECO 167
5	3-15-62	J.C.	ECO # 580
6	7-16-62	J.C.	ECO # 580

THE FOLLOWING CONTROLS IN CHANNEL "A" ARE MECHANICALLY GANGED WITH IDENTICAL CONTROLS IN CHANNEL "B".....

1. INPUT SELECTOR
2. EQUALIZATION
3. SCRATCH FILTER
4. LOUDNESS - VOLUME
5. LOUDNESS AND POWER SWITCH
