New Scott Transistor Tuner Brings Major Improvement to FM Listening

...and you can own one for only $259.95

Great news! Scott announces a top-performing solid-state FM stereo tuner at a modest price...a no-compromise tuner that exceeds the performance of conventional tube units, and is factory guaranteed for two full years. The superb performance of the new Scott 312 required an entirely new approach to tuner circuit design...not just a simple substitution of transistors for tubes...it meant not just one, but six major engineering innovations. A few of these are shown below:

Extravagant "compaction" provides freedom from the ordinary automatic devices. Momentary changes in signal strength will not cause stereo to switch in and out as do ordinary automatic devices.

"Flat Line Limiting" circuits assure quiet noise-free FM reception, impervious to pulses caused by automobile ignitions, refrigerators, apartment-house elevators, and other electrical noises.

New Scott silver-plated four-niter front-end outperforms even the best conventional vacuum tube front ends. Features include greater reliability, longer life, and guaranteed stability over years of use.
