

New 345 Tuner/Amplifier... the engineering leadership you expect from Scott at an unexpected low price

The 345 is an exceptional accomplishment . . . even for Scott. It combines the features, the performance, the specifications of separate tuners and amplifiers and sells for less than \$350. Achieving this rare combination of top performance and top value took many long months of painstaking research and around-the-clock work from

the most imaginative engineering minds in high fidelity . . . the Scott Advanced Development Group.

Their achievement is based on an entirely new approach to tuner/amplifier design that has resulted in three major new engineering breakthroughs:

1. **Low Impedance Symmetrical Drive**—an all new amplifier circuit that provides more power (right down to the important low frequencies), lower distortion, cooler operation, and complete stability.

2. **Series-Gate Time-Switching Multiplex** provides probably the greatest stereo separation of any combined tuner-amplifier available. The 345 offers the ultimate in startlingly live stereo sound.

3. **Pulse Suppression-Limiting** effectively offers four stages of limiting for improved suppression of impulses from sources like automobile ignitions. Now you can enjoy quiet noise-free FM sound.
