Note:
The "EB" indication shown on the packing case indicates United Kingdom.

Before connecting, operating or adjusting this product, please read these instructions completely.
Please save this manual.
Dear Customer

Thank you for purchasing this Technics product.
For optimum performance and safety, please read
these instructions carefully.

Caution for AC mains lead

(For United Kingdom)
(“EB” area code model only)
For your safety, please read the following text carefully.

This appliance is supplied with a moulded three pin mains plug
for your safety and convenience.
A 5-ampere fuse is fitted in this plug.
Should the fuse need to be replaced please ensure that the
replacement fuse has a rating of 5-ampere and that it is approved
by ASTA or BSI to BS1362.
Check for the ASTA mark ø or the BSI mark ø on the body of
the fuse.

If the plug contains a removable fuse cover you must ensure that
it is refitted when the fuse is replaced.
If you lose the fuse cover the plug must not be used until a
replacement cover is obtained.
A replacement fuse cover can be purchased from your
local dealer.

WARNING: DO NOT CONNECT EITHER WIRE TO THE
EARTH TERMINAL WHICH IS MARKED WITH THE LETTER E,
BY THE EARTH SYMBOL \ or coloured green or
green/yellow.

THIS PLUG IS NOT WATERPROOF–KEEP DRY.

Before use
Remove the connector cover.

How to replace the fuse
The location of the fuse differs according to the type of AC mains
plug (figures A and B). Confirm the AC mains plug fitted and fol-
low the instructions below. Illustrations may differ from actual AC
mains plug.
1. Open the fuse cover with a screwdriver.

CAUTION!
IF THE FITTED MOULDED PLUG IS UNSUITABLE FOR
THE SOCKET OUTLET IN YOUR HOME THEN THE FUSE
SHOULD BE REMOVED AND THE PLUG CUT OFF AND
DISPOSED OF SAFELY.
THERE IS A DANGER OF SEVERE ELECTRICAL SHOCK
IF THE CUT OFF PLUG IS INSERTED INTO ANY 13-
AMPERE SOCKET.

If a new plug is to be fitted please observe the wiring code as
shown below.
If in any doubt please consult a qualified electrician.

IMPORTANT
The wires in this mains lead are coloured in accordance with the
following code:
Blue: Neutral, Brown: Live.
As these colours may not correspond with the coloured markings
identifying the terminals in your plug, proceed as follows:
The wire which is coloured Blue must be connected to the termi-
nal which is marked with the letter N or coloured Black or Brown.
The wire which is coloured Brown must be connected to the termi-
nal which is marked with the letter L or coloured Brown or Red.

(For Australia and N.Z.)

THIS TUNER/RECEIVER IS CAPABLE OF RECEIVING THE NEW AM STEREO BROADCASTS FROM THE AM BAND RADIO STATIONS.
HOWEVER LIKE MANY TUNERS AND RECEIVERS CURRENTLY AVAILABLE ON THE MARKET IT WILL REPRODUCE THIS AM STEREO
SIGNAL ONLY IN AM MONO, WHICH, IN EFFECT, IS OF NO LESSER QUALITY THAN YOUR EXISTING AM MONO TUNER/RECEIVER.

Use numbers indicated in parentheses when asking for replacement parts.
Suggestions for safety

Placement
Avoid placing the unit in areas of:
- direct sunlight
- high temperature
- high humidity
- excessive vibration
- uneven surfaces (Place the unit on a flat level surface.)
Such conditions might damage the cabinet and/or other component parts and thereby shorten the unit’s service life.

Ventilation
- Place the unit in a well ventilated position at least 10 cm away from wall surfaces etc.
- Ensure that curtains and similar materials do not obstruct the ventilation holes.

Stacking
Never place heavy items on top of the unit or the power cord.

Voltage
- It is very dangerous to use an AC power source of high voltage such as for an air conditioner.
  A fire might be caused by such a connection.
- A DC power source can not be used.
  Be sure to check the power source carefully, especially on a ship or other place where DC is used.

Power cord protection
- Avoid cuts, scratches or poor connection of the AC mains cord, as this may result in fire or electric shock hazard.
  Excessive bending, pulling or slicing of the cord should also be avoided.
- Do not pull on the cord when you are disconnecting the power, as this could cause an electric shock. Grasp the plug firmly when you disconnect the power supply.
- Never touch the plug with wet hands or a serious electric shock could result.

Foreign materials
- Ensure that no foreign objects, such as needles, coins, screwdrivers etc., accidentally fall into the unit or through the ventilation holes.
  Otherwise, a serious electric shock or malfunction could occur.
- Be extremely careful about spilling water or liquid on/into the unit, as a fire or electric shock could occur.
  (Disconnect the power plug and contact your dealer immediately if this occurs.)
- Avoid spraying insecticides onto the unit as they contain flammable gases which can be ignited.
- Insecticides, alcohol, paint thinner and similar chemicals should never be used to clean the unit as they can cause flaking or cloudiness to the cabinet finish.

Maintenance
Clean the cabinet, panel and controls with a soft cloth lightly moistened with mild detergent solution.

Do not use any type of abrasive pad, scouring powder or solvent such as alcohol or benzine.

Service
- Never attempt to repair, disassemble or reconstruct the unit if there seems to be a problem.
  A serious electric shock could result if you ignore this precautionary measure.
- If a problem occurs during operation (the sound is interrupted, indicators fail to illuminate, smoke is detected, etc) contact your dealer or Authorized Service Center immediately.
- Disconnect the power supply if the unit will not be used for a long time. Otherwise the operation life could be shortened.

CAUTION
Do not place a tape deck or CD player on top of this unit.
Heat radiated from the top of this unit may cause damage to the tape or CD software.

CAUTION!
DO NOT INSTALL OR PLACE THIS UNIT IN A BOOKCASE, BUILT IN CABINET OR IN ANOTHER CONFINED SPACE IN ORDER TO KEEP WELL VENTILATED CONDITION. ENSURE THAT CURTAINS AND ANY OTHER MATERIALS DO NOT OBSTRUCT THE VENTILATION CONDITION TO PREVENT RISK OF ELECTRIC SHOCK OR FIRE HAZARD DUE TO OVERHEATING.

**Power meters (5, 8)**
The meters on each side of the display indicate the power mix of all the speakers combined, the left power mix on the left and the right power mix on the right.

When only the center speaker is producing sound, as is the case with monaural signals, output testing or dialogues heard in the Dolby Pro Logic playback mode, the left and right needles waver exactly the same.

### For your reference
The short and long bars found on some of the buttons indicate whether you have to press (-) the button or hold it down (--) to access/operate the function.
Connecting audio equipment

Make sure that the power supply for all components has been turned off before making any connections.

**Note**
Do not place books, etc., on top of this unit or block the heat radiation vents in any way.

---

**Stereo connection cable**
(not included)

**Video connection cable**
(not included)

---

**Tape deck (not included)**

**CD player (or CD changer) (not included)**

---

**This unit**

**Cooling fan**
The cooling fan operates at high power output levels only.

---

A "DECODER OUTPUT"/ "POWER AMP INPUT" terminals

These terminals can be used in either of the following two ways.

1. For connecting a power amplifier (not included). This will allow you to enjoy amply reproduced sounds in large rooms of more than about 85 cubic meters. (See page 13.)

2. For connecting a graphic equalizer (not included). This lets you correct the sound quality of your system, such as adjusting frequency characteristics to the listening room.

   With a graphic equalizer, you have to use the "DECODER OUTPUT" and "POWER AMP INPUT" terminals of a specific channel whose sound quality you want to correct. Connect the "DECODER OUTPUT" terminal to the input terminal on the graphic equalizer, and the output terminal on the graphic equalizer to the "POWER AMP INPUT" terminal.
Connecting video equipment

Stereo connection cable
(not included)
Video connection cable
(not included)

VCR (not included)

VCR (not included) [playback only]

This unit

Monitor TV
(not included)

Video projector
(not included)

Screen for video projector
(not included)

AC power supply cord (included)

Connector
Approx. 6 mm
Appliance inlet

Even when the connector is perfectly inserted, the front part of the connector jut out as shown in the drawing. However there is no problem using the unit.

(United Kingdom only)
BE SURE TO READ THE CAUTION FOR THE AC POWER SUPPLY CORD ON PAGE 2 BEFORE CONNECTION.
Connecting video equipment (continued)

Connections to/from S-VIDEO terminals
This receiver has an S-VIDEO terminal for a TV, laser disc player
and VCR (VCR 1 only)

To the S-VIDEO input
terminal of a VCR
To the S-VIDEO input
terminal of a TV
To the S-VIDEO output
terminal of a laser disc player

Laser disc player (not included)
Connecting laser
disc player
AUDI0 OUT VIDEO OUT

Connecting components capable of 6
channel output such as AC-3 decoders

Connecting to the front VCR 3 terminals

Camcorder
(not included)
AUDIO OUT (FRONT L/R)

Caution when using a TV with an
S-VIDEO terminal

On some television models, the video signal from components
which do not use S-VIDEO input and are connected only to the
VIDEO terminals will not be shown on the television screen.
If this occurs, use one of the following methods to view the video
signal.

Does the television have a
"VIDEO/S-VIDEO" selector
switch?

YES

Set the switch to "VIDEO".

NO

If the television has two or more video input
terminals
Connect the VIDEO terminal and the S-VIDEO
terminal to different video input terminals on the
Television, and switch the picture on the television
according to the video source being
played.

If the television has only one video input
terminal
Disconnect the S-VIDEO cable connected to
the television's S-VIDEO terminal and connect
only the video terminal.
Antenna connections

AM loop antenna (included)

This antenna is normally sufficient for reception of MW/LW (For Australia and N.Z.: AM) broadcasts.

Install the AM loop antenna holder (included) at the rear panel of this unit and then attach the AM loop antenna to the AM loop antenna holder (facing in the direction of best reception).

When mounting the antenna to a column, a wall or rack
Mount it vertically.

Pay attention to the following points when mounting the antenna.
- Do not mount it horizontally (doing so will impair reception).
- Do not mount it close to power cords, speaker wires or metal surfaces (doing so will result in noise).
- Do not mount it close to a tape deck. When the tape deck is being used, chirping or beeping sounds may result.

FM indoor antenna (included)

This antenna is normally sufficient for reception of FM broadcasts.
**Antenna connections**

**AM outdoor antenna (not included)**

The outdoor antenna should be used when using the main unit in mountainous areas or in spaces enclosed by reinforced concrete where the AM loop antenna (included) does not provide satisfactory reception.

Stretch 5–12 m of vinyl-covered wire horizontally across a window frame or other convenient location, keeping it as high as possible from the ground.

When the unit is not in use, disconnect the outdoor antenna to prevent possible damage that may be caused by lightning. Never use an outdoor antenna during an electrical storm.

**Note**

Be sure to connect the AM loop antenna even when an outdoor antenna is used.

---

**FM outdoor antenna (not included)**

The outdoor antenna should be used when using the main unit in mountainous areas or in spaces enclosed by reinforced concrete where the FM indoor antenna (included) does not provide satisfactory reception.

**Note**

An outdoor antenna should be installed by a qualified technician only.

*(For United Kingdom)*

**FM outdoor antenna (not included)**

*(For Australia and N.Z.)*

**FM outdoor antenna (not included)**

---

**To connect a 75-ohms coaxial cable**

1. Remove a piece of the outer vinyl insulator.
2. Remove the cover while pulling the tabs.
   **Note**
   If the tabs are pulled too hard, the casing may be damaged.
3. Remove the lead wire and clamp it with the plastic bar.
4. Install the coaxial cable.
5. Attach the cover.

---

**To connect a 300-ohms feeder wire**

Loosen the screw to connect the feeder wire and tighten it to secure the connection.
**Speaker connections**

### Placement of speakers

<table>
<thead>
<tr>
<th>Front left speaker (not included)</th>
<th>Screen (or monitor TV) (not included)</th>
<th>Front right speaker (not included)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Center speaker (not included)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Subwoofer (not included)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Surround left speaker (not included)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Surround right speaker (not included)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

For **front speakers**
Place the front left/right speakers at both the left and right edges of the screen at seated ear height so that there is good coherency between the picture and sound.

For **center speaker**
Place the center speaker underneath or above the center of the screen (or monitor TV). Aim the speaker such that it is pointed at the seating area.

For **surround speakers**
Place these speakers somewhere between 1.5 m–2 m from the floor on the left and right sides of the listening position.

For **subwoofer**
The subwoofer can be placed in any position as long as it is at a reasonable distance from the screen or monitor TV. Note that some experimentation in placement of the subwoofer can yield smoothest low frequency performance. Placement near a corner can increase the apparent output level, but can result in unnatural bass.

**For your reference:**
The SA-TX50 will provide outstanding performance when used with any speaker system. For most accurate multichannel soundtrack reproduction, the use of a THX-certified speaker system is recommended.

### Connection of front speakers

**To connect cords to terminals**

1. Strip off the outer covering, and twist the center conductor.

2. Turn completely to the left.

3. Insert the wire and turn completely to the right. Pull the cord to assure a proper connection. Be sure to only connect positive (+) cords to positive (+) terminals, and negative (−) cords to negative (−) terminals.

**Note**
To prevent damage to circuitry, never short-circuit the positive (+) and negative (−) speaker wires.

- Banana type connectors are not suitable for use with the speaker terminals of this unit.
- When connecting THX-approved front speakers, be sure to also use a THX-approved subwoofer in order to achieve a full THX system.

#### “B” terminals
For connection to a second pair of speakers.

#### Speaker Impedance

When only the “A” or “B” speakers are connected:
The impedance of the speaker used with this unit must be 4–16 Ω.

**Note**
If speakers under 6 Ω are connected, be sure to set the impedance on the unit to LOW according to step 2 on page 14.

When both the “A” and “B” speakers are connected simultaneously:
The impedance of the speaker used with this unit must be 8–16 Ω.
**Connection of surround speakers**

Before sound can be heard from the surround speakers, both surround speakers must be connected.

**Speaker Impedance**

The impedance of any speaker used with this unit must be 4–16 Ω.

If speakers under 6 Ω are connected, be sure to set the impedance on the unit to LOW according to step 2 on page 14.

---

**Connection of center speaker**

The impedance of any speaker used with this unit must be 4–16 Ω.

If a speaker under 6 Ω is connected, be sure to set the impedance on the unit to LOW according to step 2 on page 14.

---

**Connection of subwoofer**

A subwoofer is recommended when bass sounds are inadequately reproduced from front speakers that are too small. For subwoofer placement, see page 11.

**Note**

- The SA-TX50 has no amplifier section designed especially for the subwoofer, so it is necessary to purchase a subwoofer with a built-in amplifier or buy the two separately.
- The SA-TX50 will provide outstanding performance when used with any subwoofer and power amplifier. For most accurate sound reproduction, the use of THX-certified subwoofer and power amplifier is recommended.

---

**Connecting a subwoofer which does not have a built-in amplifier**

To input terminal

Power amplifier (not included)

Subwoofer (not included)
Optional power amplifier connections

(Using the DECODER OUTPUT terminals)

If the listening room in your home has a total volume of more than about 65 cubic meters you can best experience THX sound by connecting larger external power amplifiers (sold separately) to the "DECODER OUTPUT" terminals on the rear of this unit.

![Diagram of power amplifier connections]

Note when using the "DECODER OUTPUT" terminals

- In order to obtain correct multi-channel playback performance, be sure to press speaker select button A or B on the front of this unit (A or B will illuminate).
  - If neither A or B is illuminated on the display, sound will not come out from any speakers other than the front left/right speakers.
- The SA-TX50 will provide outstanding performance when used with any speaker and power amplifier.
  - For most accurate sound reproduction, the use of THX-certified speakers and power amplifiers is recommended.

Concerning the remote control

Battery installation

- Thoroughly clean the battery compartment before inserting new batteries.
- Do not mix old and new batteries, or batteries of different types (carbon and alkaline, etc.).
- If you will not use the remote control for a long period of time, remove the batteries and store them in a cool, dark place.
- Do not use rechargeable type batteries.
- Do not attempt to recharge alkaline or carbon batteries.
- Always remove old, weak or worn-out batteries promptly and dispose of them properly.
- Never subject batteries to excessive heat or flame; do not attempt to disassemble them, and be sure they are not short-circuited.
- If the leaking electrolyte comes into contact with skin or clothes, flush with water immediately.

Battery life

Battery life is about one year.

The batteries should be replaced if the system fails to respond to commands from the remote control transmitter even when held close to the remote control signal sensor.

When you need to replace these batteries

Use two R03/LR03 (AAA SIZE, UM-4) or equivalent batteries.

Method for use

![Diagram of remote control signal sensor]

- Avoid any obstacles
  - Transmission window
    - About 7 meters in front of the signal sensor. (The actual range will depend on the angle at which the remote control is used.)

When operating a TV, VCR, laser disc player or an audio equipment with a remote control system, face this remote control toward the remote control sensor of the unit to be operated.

Note

- Be sure the transmission window and the unit's sensor are free from dust. Excessive dust may affect performance.

The operation may not be correct if direct sunlight or another strong light source strikes the receiving sensor of this unit. If there is a problem, place the unit away from the light source.
Adjusting the output level of each speaker

1. Press POWER to switch on the power.

2. Press A or B to select the front speaker systems to be used. A and B refer to the speaker terminals at the rear of the unit.

Press THX CINEMA to turn on the THX CINEMA mode.

3. The indicator above this button will illuminate.

4. Press CENTER MODE to select the correct center mode.

When the button is pressed, the current center mode is displayed. Holding it down again changes the center mode.

- NORM [NORMAL <SMALL>]
  When the center speaker is smaller than the front speakers

- WIDE [WIDE <LARGE/THX>]
  When the center speaker is the same size as the front speakers or when your speaker system is THX certified and includes a subwoofer

- PHANT [PHANTOM <NONE>]
  When no center speaker is connected.

5. Press TEST by remote control only to output a test signal.

Test signal sounds automatically and switches from speaker to speaker.
You can also select a particular speaker without waiting until its turn comes, by pressing CH SELECT.

Front left speaker → Center speaker → Front right speaker
Subwoofer → Surround left speaker → Surround right speaker

Note:
In the PHANTOM mode, the sound from the center speaker can not be heard.

- Before operation, set VOLUME to the "MIN" position.
- When viewing a video, turn on the power supply for the TV and set the TV to video mode.
- When ready to adjust speakers output level, situate yourself away from the speakers as you normally do when listening.
When you turn on the TV and set the TV to the video mode, the output test display will appear on the TV. (See page 27.)

**TEST — LEVEL ADJUSTMENT**

<table>
<thead>
<tr>
<th>FL</th>
<th>FC</th>
<th>FR</th>
<th>SL</th>
<th>SW</th>
<th>SR</th>
</tr>
</thead>
<tbody>
<tr>
<td>+10</td>
<td>-1</td>
<td>-12</td>
<td>0</td>
<td>+5</td>
<td>+1</td>
</tr>
</tbody>
</table>

In this example, the test signal is being emitted by the front left speaker.

By remote control only

Press CHANNEL LEVEL (−) or (+) to adjust the output level balance.

Adjust each speaker with CHANNEL LEVEL “−”, “+” to obtain equal sound level all around.

- Decrease the output level.
- Increase the output level.

The output levels can be varied within a range of −12 dB to +12 dB.

For your reference:
- If you have a sound level meter, set all speakers to 75 dB SPL (C-weighted/slow mode at seating position).
- To help you balance your speakers accurately, the test signal is output at a uniform volume and is not effected by volume control settings.

To stop the test signal
Press TEST on the remote control.

For your reference
When you adjust speaker output level (steps 2–6), output level is automatically adjusted for not only the THX CINEMA mode but also the SURROUND and 3 STEREO modes.

Note
If you replace your front speakers after adjusting output level, playback balance may be lost depending on speaker efficiency. If this happens, simply readjust output level.

If a subwoofer is not connected to this unit.

Hold down SUBWOOFER OFF/ON until “OFF” appears.

To return to the “ON” condition, hold down the button until the “ON” appears.

---

**Adjusting the delay time**

This adjustment reduces audible crosstalk from the surround speakers so that screen sounds such as dialogue will be correctly heard from their normal position at the front.

1. Press THX CINEMA to turn on the THX CINEMA mode.

2. Press DELAY TIME to set to the suitable time.

When the button is pressed, the current delay time is displayed. If you then hold it down, the delay time changes. Each time you perform this combination, the delay time will increase by 5 ms within a range of 15 ms to 30 ms.

To calculate the delay time, refer to the method below.

The standard setting is 20 ms.

Front left speaker
Center speaker
Front right speaker

Surround left speaker

Surround right speaker

D1: Distance from front speakers
D2: Distance from surround speakers

- If D1 is equal to or less than D2
  - Set to 15 ms.
- If D2 is less than D1
  - Start at 15 ms and increase by 5 ms for every 1.5 m of difference between D1 and D2.

**For your reference**

When you adjust delay time (steps 1 and 2), delay time is automatically adjusted for not only the THX CINEMA mode but also the SURROUND mode.
Basic operations

1. Press POWER to switch on the power.

2. Press A or B to select the speaker system to be used.
   Note: If using both speakers A and B at the same time, be sure to set the playback mode to "STEREO" (see step 4.).

3. Press INPUT SELECTOR (< or >) to select the desired source.
   Each time you press this button, audio and video sources will be switched as follows.

   TUNER —— CD —— TAPE —— VCR 1
   TV —— VDP6CH —— VDP —— VCR 3 —— VCR 2

   These indications correspond to terminals on the front and rear panels. Switch the displayed indication to the source you want to use.

   Note: When you select "VDP6CH" as the input source, you do not have to perform step 4 because the playback mode is fixed for VDP6CH sources.

4. Press to select the desired playback mode.

   THX CINEMA: For motion picture program material recorded in the Dolby Surround format (See the right page.)
   SURROUND: For program material recorded in the Dolby Surround format but which was not mixed in a film dubbing stage (See the right page.)
   3 STEREO: For program material which has been recorded in the Dolby Surround format without the use of surround speakers (See the right page.)
   SFC: For giving the music or movie presence and spread (See page 18)
   STEREO: For CD's and tapes recorded in stereo
   MONO: For monaural recordings

5. Start the desired source.
   • See page 21 for listening to radio broadcasts.
   • See the appropriate operating instructions for operating optional equipments.

6. Turn VOLUME to adjust the volume level.

For your reference
If you want, you can reproduce the same volume used in dubbing stages. To do so, set output level from all your speakers to 75 dB SPL (see step 6 on page 15). Watch the sound level meter to get an accurate setting. And, select the THX CINEMA mode (step 4 on this page). Finally, and most importantly, set volume control to "REFERENCE".

After listening is finished
Be sure to reduce the volume level, and switch the power to the standby condition by pressing POWER.
DOLBY PRO LOGIC modes

There are three modes of operation. BEFORE using any of them, be sure you make all the preparations explained on pages 14 and 15.

THX CINEMA

This mode faithfully reproduces motion picture program material which has been recorded in the Dolby Surround format. It achieves this by recreating the same qualities of film studio sound recording stages (known as the dubbing stage). Home THX systems provide home viewers with the same degree of sound quality as the THX theater sound systems created by Lucasfilm Ltd. By combining this sound with the picture on a wide screen, this mode lets you enjoy a true home sound system with full intensity and feeling of "being there".

3 STEREO

This mode reproduces program material which has been recorded in the Dolby Surround format without the use of surround speakers. Also music and news programs can be heard with better clarity and localization.

SURROUND

This mode is for program material which has been recorded in the Dolby Surround format but which was not mixed in a film dubbing stage. By reproducing the feeling of depth and movement of sound, video software or compact discs recorded with Dolby Surround provide the listener with a feeling of "being there".

Manufactured under license from Dolby Laboratories Licensing Corporation. DOLBY, the double-D symbol®, and "PRO LOGIC" are trademarks of Dolby Laboratories Licensing Corporation.
**SFC modes**

The SFC (Sound Field Control) function gives presence and spread thereby enhancing and enriching the music or movies not recorded in Dolby Surround. Read the explanations below in order to better understand how to make your selection.

**HALL**
This mode imparts a reflection and spread which will make you feel as if you are in a large concert hall.

**CLUB**
Like a jazz club, this mode provides an exciting and intimate atmosphere. It simulates the sound field of a relatively small room having a low ceiling and hard reflective surfaces, for a "live" sound with enhanced presence to bring the performers up close.

**LIVE**
Primarily for vocal pieces, this mode adds gloss to the vocals and you'll feel as though you were hearing a live stage performance.

**THEA (THEATER)**
You can clearly perceive the directions and source of the movie. Real ambience of sound can also be recreated naturally using this mode.
THEATER mode can be used with stereo sources not encoded with DOLBY SURROUND.

**Note**
When using Dolby Surround encoded source materials, select the DOLBY PRO LOGIC mode.

**CHURCH**
When listening to the sound of the pipe organ, harpsichord, etc., this mode is most effective to create the rich reverberations you would hear if you were in a church.

**STADIU (STADIUM)**
When listening to baseball or football broadcasts, this function automatically sets the appropriate bass level for the announcer's voice (mono) and audience cheers (stereo).

**SIMU (SIMULATED)**
You can feel as if you were in a more expanded space adding to the actual sound from the source. This mode also adds effect to monaural sources by outputting the sound from surround speakers.

**SSI 1**
This mode provides the natural ambience of a concert hall, ideal when listening to orchestral performances.

**SSI 2**
This mode offers a stronger surround sound effect than SSI 1.

**SSI 3**
This mode adds a center channel for vocals positioned in the center, and a stronger surround effect for an exciting "live" atmosphere.

For your reference
SSI is short for Sound Stage Imaging.

---

**Press SFC to turn on the SFC function (Indicator will illuminate) and select the desired mode.**

When the button is pressed, the current mode is displayed. Each time you press this button, SFC modes will be switched as follows.

HALL → CLUB → LIVE → THEA (THEATER) → CHURCH
SSI 3 ← SSI 2 ← SSI 1 ← SIMU (SIMULATED) ← STADIU (STADIUM)

---

To listen to any source in the field of sound you like

---

**To adjust the output level of each speaker**
1. Press CH SELECT to select the speakers to be adjusted. When the button is pressed, the current channel is displayed. Pressing it again changes the channel.
2. While the desired channel is displayed, press CH LEVEL (-) or (+) to adjust the output level.

---

**To adjust the delay time**
Adjust sound spread. As a yardstick, remember that the higher the number on the display, the greater the spread.
Press DELAY TIME on the receiver to set the suitable time.
When the button is pressed, the current delay time is displayed. Holding it down again changes the delay time.
### STEREO/MONO modes

**STEREO**: For CD's and tapes recorded in stereo  
**MONO**: For monaural playback or recordings

---

### VDP6CH mode

This is the playback mode you want in order to enjoy components capable of discrete 8-channel output like AC-3 decoders, etc.

Before operation, adjust speaker output level in the same way as explained on pages 14 and 15. In this case, the system saves the setting in memory as the VDP6CH level.

---

Press **STEREO** to turn on the STEREO mode.  
The indicator will illuminate.

Press **MONO** to turn on the monaural mode. 
The indicator will illuminate.

---

Press **INPUT SELECTOR (< >)** or **(>)** to select "VDP6CH".

---

**Note**

When you select this mode, the stereo automatically turns OFF all other playback modes. So, there is nothing else you can select.  
To change to another mode, set the input source to something other than "VDP6CH".

**For your reference**

For details on how to operate components capable of 6-channel output such as AC-3 decoders see the instruction manual that came with the component.

---

</tbody>
</table>

*In the mono mode you cannot adjust output level from the left/right front speakers (FL/FR) when the center mode is set to "WIDE [WIDE <LARGE/THX>]".*
Basic operations

To adjust the tone quality

Turn BASS to adjust the low frequency sound of the front left and right speakers.

Turn TREBLE to adjust the high frequency sound of the front left and right speakers.

Note
The above controls do not work in the DOLBY PRO LOGIC (THX CINEMA, SURROUND, 3 STEREO) mode and the MONO mode.

To mute the sound level

by remote control only

Press MUTING.

The message "MUTING ON NOW" runs repeatedly from right to left across the display as long as the muting function is on.

Press once again to return to the previous volume level.

Note
When the receiver is turned off, the muting operation will be automatically canceled.

To listen through headphones

Use VOLUME to reduce the volume level, and connect the headphones.

If sound from speakers is not wanted, press SPEAKERS (A) and/or (B) to turn off the speaker select indicators.

If you turn OFF both sets of speakers (A and B), you get normal stereo playback from the headphones with all playback modes.

Note
Avoid listening for prolonged periods of time to prevent hearing damage.

If sound output stops during use

If you make a mistake in operation or if sound output stops due to some operation which was performed, the HELP function displays characters which can be useful for indicating the method by which this condition can be remedied.

If "ERROR" or scrolling characters (for instance, "MUTING ON NOW") appear on the display during operation, carry out the following operation.

Press HELP. (Touch only.)
The method for remedying this condition will be displayed.

For your reference:
If the above button is pressed for a longer period until "RESET" appears on the display, the operation settings for the unit will be initialized to the settings made at the time of shipment.

However, any broadcasting stations which have been preset into memory will not be erased at this time.
Listening to radio broadcasts

Sequential tuning

You can use the tuning buttons to tune-in radio broadcasts.

1. Press INPUT SELECTOR (< or >) to select “TUNER”.

2. Press BAND to select “FM”, “MW” or “LW”.
   (For Australia and N.Z.: FM or AM)

3. Press \( \checkmark \) or \( \checkmark \) to tune to the desired broadcast.

   If either button is held down for an instant until the frequency begins to scroll, the broadcast stations can be tuned in automatically when a broadcast station is found.

   **Note**
   Tuning may stop automatically if any jamming is encountered.

   Lights up when tuned
   Lights up when an FM stereo broadcast is received

   Frequency display

   If noise is excessive in the FM stereo mode
   Press FM AUTO/MONO. (The “FM STEREO” indication will go out.)

   Lights up

   The broadcast will be monaural, but noise will be reduced. If the button is pressed once more, the stereo mode will be resumed.

   **Note**
   When the receiver is turned off, the monaural mode will be automatically cancelled.

Direct access tuning

**by remote control only**

Specify the frequency using the numeric buttons on the remote control transmitter to directly tune to the desired broadcast station.

**Preparation**
First select between FM, MW or LW with the BAND button on the receiver. (For Australia and N.Z.: FM or AM)

1. Press TUNER.

   This will set the remote control to operate the receiver.

2. Press DIRECT TUNING.

   While cursor display is flashing (approx. 10 seconds)

3. Press the appropriate numeric buttons to enter the frequency.

   If the desired FM frequency is 107.90 MHz
   \( 1 \rightarrow 0 \rightarrow 7 \rightarrow 9 \rightarrow 0 \)

   If the frequency has been input correctly, the displayed frequency will blink once.

   **Note**
   1. If no button is pressed while the cursor display is flashing, the display will return to the frequency which is currently being received.
      To re-specify the frequency, repeat the procedure from step 2.
   2. If the frequency has not been input correctly, “ERROR” indication will be displayed. In this case, re-enter the frequency.
Preset tuning

By presetting the desired broadcast stations into the memory channels of this unit, broadcast stations can be selected simply by pressing numeric button(s).

---

Before presetting

How many broadcast stations can be preset?
For United Kingdom
A total of 30 FM, MW and LW stations can be preset.

For Australia and N.Z.
A total of 30 FM and AM stations can be preset.

How is presetting done?
The two following methods are available.
• Automatic memory presetting
  Automatic memory presetting allows this unit to automatically search for broadcast stations and then preset them into memory.
  With this function, searching proceeds from the frequency currently being displayed and continues through higher frequency, and broadcast stations are preset in the order in which they are located.
  With this method, the channels that can be preset into the memory are set as follows for different bands.

  For United Kingdom
  Channel
  1 2 20 21 26 27 LW
  MW
  FM

  For Australia and N.Z.
  Channel
  1 2 20 21 30
  AM
  FM

For example, after presetting the FM band, if the MW (or AM) band is preset, the previous presettings in the sections in the above illustration which overlap will be erased and the subsequent settings will be preset. Therefore, the FM band stations will be kept for channels 1–20 and the MW (or AM) band stations will be preset to channels 21–30.

• Manual memory presetting
  The desired broadcast stations can be preset into the desired channels by the user.
  This can also be used as a method for changing selected broadcast stations that were preset in "Automatic memory presetting".

  Note
  If a new broadcast station is preset into a channel, the setting for the broadcast station which was previously entered in that channel will be automatically erased.

---

Automatic memory presetting

1 Set to the frequency from which you want to start automatic memory presetting.
(See page 21.)

2 Press MEMORY until the frequency begins to change.
(Automatic memory presetting will start.)
During automatic memory presetting, the memory indicator will flash while the frequency scrolls.

Flashes

To stop, press MEMORY once again.

---

When a broadcast station is preset
The memory indicator and the preset channel number will be displayed for approximately 1 second.

Lights up

---

When presetting is completed
The last broadcast station to be preset will be displayed.

Note
Frequencies may not be preset correctly in cases where the broadcast waves are too strong or too weak. In such cases, carry out presetting manually.
Manual memory presetting

To listen to preset broadcast stations

Set to the desired broadcast.
(See page 21.)
If interference or static is keeping you from enjoying an
FM broadcast, press FM AUTO/MONO and change to
monaural. You can preset the memory in monaural just
as in stereo.

Press MEMORY. (Touch only.)
Lights up

To cancel the memory function, press
MEMORY again.

Press \ or \ to select the
desired channel.

Holding the buttons down lets you scroll
through channels faster.

Press MEMORY.
The channel will blink on the display.

Press \ or \ to select the
desired channel.

Preset channel
Holding the buttons down lets you scroll
through channels faster.

For tuning by remote control
First press the TUNER button on the remote control and specify the
channel you want with the numeric keys. (See page 30.)

To designate channels 1–9
Press the appropriate (1–9) preset-tuning button.

To designate channels 10–30
(Example: Channel 12)

\( \geq 10 \rightarrow \frac{1}{10} \rightarrow 2 \)

(within 10 sec.) (within 10 sec.)

To confirm the channel number of the broadcast
station being received
Press TUNER on the remote control.
(The channel number will be displayed for about one second.)

Note:
The channel number is not displayed if you change the reception
frequency or FM mode setting.

For your reference
Even if the power is switched to standby or the power cord is dis-
connected from the household AC outlet, the memory will retain its
contents for approximately one month.

If frequency presettings are accidentally erased
Make the presettings once again.
The power cord should remain connected for one hour or more for
the memory back-up to be effective.

To continue presetting
Repeat steps 1 through 4.
Making a recording

**Note**
- Tone adjustments and playback mode effects cannot be recorded.
- Do not change the input source while recording. This will change what is recorded on tape.

**Recording on the VCR**

You can record only on VCR 1.
Before recording, prepare the VCR (VCR1) for recording (recording level adjustment, input selector setting, etc.).
See the VCR's operating instructions for details.

1. **INPUT SELECTOR (< or >)** to select the desired source to be recorded.
   - Each time you press this button, audio and video sources will be switched as follows:
     - **TUNER → CD → TAPE → VCR 1**
     - **TV → VDP6CH → VDP → VCR 3 → VCR 2**
   - **To record TV pictures and sound**
     - Be sure to set the TV/VIDEO mode on the TV to "TV".
   - **Note**
     - When you select VDP6CH, only sound from the front left and right speakers is recorded.
     - To record all 6 channels, switch to a 2 channel output mode. For details, see the instruction manual that came with the connected equipment.

2. **Begin recording on the VCR 1.**
   - Follow your VCR's operating instructions.

3. **Begin the desired source to be recorded.**
   - Follow your equipment's operating instructions.

**Recording on the tape deck**

Before recording, prepare the tape deck for recording (recording level adjustment, etc.).
See the tape deck's operating instructions for details.

1. **INPUT SELECTOR (< or >)** to select the desired source to be recorded.
   - Each time you press this button, audio and video sources will be switched as follows:
     - **TUNER → CD → TAPE → VCR 1**
     - **TV → VDP6CH → VDP → VCR 3 → VCR 2**
   - **To record TV sound**
     - Be sure to set the TV/VIDEO mode on the TV to "TV".
   - **Note**
     - When you select VDP6CH, only sound from the front left and right speakers is recorded.
     - To record all 6 channels, switch to a 2 channel output mode. For details, see the instruction manual that came with the connected equipment.

2. **Begin recording.**
   - Follow your tape deck's operating instructions.

3. **Begin the desired source to be recorded.**
   - Follow your equipment's operating instructions.

**For your reference**

There are VCR 3 terminals at the front of this unit.
It is easier to carry out dubbing from a camcorder if it is connected to the front terminals.
On-screen display function

The On-Screen Display function can provide a wide range of information on a TV screen, thus making operation easier. For example, by pressing the button(s), the state of each setting will display. If there is no sound and you do not understand why, press the HELP button to display an outline drawing of the unit and applicable operating procedures on the TV.

Note
The On-Screen Displays are produced as PAL system video signals. With TVs of other video systems, the displays may not be clear.

Before trying to display anything
- Check your receiver is connected from "TV MONITOR OUT" on the rear panel to "VIDEO INPUT" on the TV rear panel.
- Turn on the power supply for the TV and set the TV to the video mode.

Note
When using a TV with an S-VIDEO terminal, see page 8.

Types of displays for TV screens

There are 5 different types of displays that appear on the TV.

1. Simple stereo operation displays

These displays mirror operation as you press buttons.

They are directly superimposed over the picture while you watch and operate your receiver, except, of course, if no picture is projected, then a blue background is produced.

Messages are displayed only when you operate the controls shown below.

![image of a remote control and TV]

SELECTOR: VCR 1

In this example, the VCR1 has been selected as the input source.

Note
While muting is ON, the message "MUTING ON NOW" is displayed. The box and wording are alternately highlighted to call your attention to the fact that the sound has been muted.

- Auto HELP

The following messages run across the TV screen when you turn ON the power to the receiver, if your receiver is set as described below.

<table>
<thead>
<tr>
<th>Receiver setting</th>
<th>Messages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Both speakers A</td>
<td>SPEAKERS OFF NOW</td>
</tr>
<tr>
<td>and B are OFF</td>
<td></td>
</tr>
</tbody>
</table>

To turn OSDs (On-screen display) ON/OFF

Hold down the FM AUTO/MONO button on the main unit for a moment. Every time you hold the button down, the function switches between ON and OFF. On the TV, OSD ON and OSD OFF will be displayed as you make your selection.

REMEMBER the FM AUTO/MONO button turns ON/OFF the simple stereo operation displays only and has nothing to do with other displays mentioned in this section.
Types of displays for TV screens

2 Basic control status display

This display lets you get a quick view of your present settings.

Though basic, it puts the status of the settings below on a single screen, in front of a blue background, for your review.

To view, press the HELP button. (Touch only.)
Pressing again turns off the display.

- Currently set input source
- Selected speaker systems
- Dolby Pro Logic/SFC/STEREO/MONO/VDP6CH modes

In this example, VCR1 has been selected as the input source, speaker A is selected, delay time is 20 ms, the DOLBY PRO LOGIC THX CINEMA mode is ON and the WIDEBAND is selected as the center mode.

When you're having trouble operating your receiver, the help display appears when you press the HELP button (Touch only). (See "Help displays" at the right.)

3 Help displays

These displays promptly advise you on what to do when you're having trouble operating your receiver, for example, when no sound comes out.

To get help, press the HELP button (Touch only). The button you need to operate will start flashing on the illustration and information you'll want to know will be highlighted on a green background.

Example 1

In this example, sound is not coming out because the speaker select buttons are both OFF.

Note:

In the above example, after the message shown is displayed, the message "SELECT SPEAKER A OR B" runs across the screen from right to left, instructing you how to gain back the sound.

Example 2

In this example, sound is not coming out because muting is ON.

Note:

In the above example, after the message is displayed, the message "PRESS THE MUTING BUTTON ON REMOTE CONTROLLER" runs across the screen from right to left, instructing you how to gain back the sound.
If you press the wrong button or do something the receiver won’t let you, the message “ERROR” will be shown on the receiver’s display. At the same time, the message “PLEASE PRESS THE HELP BUTTON” will run across the TV screen.
In such a case, press the HELP button (Touch only). A worded message explaining how to fix the trouble will run across the display while the button you need to press will flash on the illustration also.

**When you wrongly input the frequency in direct tuning**
The message “ENTER CORRECT FREQUENCY” will run across the screen.

**When you try turning ON both speaker A and B while Dolby Pro Logic (THX CINEMA, SURROUND, 3 STEREO), SFC or MONO is ON**
The message “PRESS THE STEREO BUTTON OR SELECT ONLY SPEAKER A OR B” will run across the screen.

**When you try turning ON both speaker A and B while VDP8CH mode is ON**
The message “SELECT ONLY SPEAKER A OR B” will run across the screen.

**When you try turning ON either Dolby Pro Logic (THX CINEMA, SURROUND, 3 STEREO), SFC or MONO while both speaker A and B are ON**
The message “TURN OFF SPEAKER A OR B” will run across the screen.

---

### 4 Output test display

This display is handy when adjusting speaker output level if you’re using Dolby Pro Logic (THX CINEMA, SURROUND, 3 STEREO) and VDP8CH.

As each speaker emits the test signal, that speaker’s icon is highlighted on the TV. The display follows the sequence the speakers do, unless of course, you select a particular speaker, then it returns to that speaker’s icon.

<table>
<thead>
<tr>
<th>TEST</th>
<th>LEVEL ADJUSTMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>FL +10</td>
<td>FC -1</td>
</tr>
<tr>
<td>SL 0</td>
<td>SW +5</td>
</tr>
</tbody>
</table>

In this example, the THX CINEMA mode has been selected and the test signal is being emitted by the front left speaker.

**Note**

While you adjust output level, the test signal is produced only from the speaker you are now adjusting. At the same time, the display stops on that speaker’s icon and a volume bar indicating output in dB appears. The level then changes as you adjust output.

---

### 5 Overload display

When this message is displayed, you have overloaded your system.

**Probable cause(s)**
The protection circuitry has functioned because the positive and negative speaker connection wires are “shorted”. Speaker systems with an impedance less than the indicated rated impedance of this unit are used or under severe use, such as loud volume, excessive power and in an excessively hot environment.

The “OVERLOAD” message will appear on a red background.

When this display comes up, switch off the power, and after determining and correcting the cause, switch ON the power once again.
Sleep timer function

The sleep timer is an excellent little feature that lets you fall asleep with the radio. You can set the timer to turn off after 30, 60 or 90 minutes.

**Note**
The sleep timer turns off the receiver, but it does not turn off any externally connected components.

1. Set to the desired broadcast.
(See pages 21-23.)

2. (While listening to a source)
Press SLEEP and set how long (minutes) you want the source to continue playing. Each time the button is pressed, the indicator will change in the order:
30 → 60 → 90 → OFF

The display returns to the way it was before in about 5 seconds, and the “SLEEP” indicator will appear on the display.

---

To cancel the sleep timer
Press SLEEP until “OFF” is displayed. The “SLEEP” indicator will go out.

To check how much time is left (while the timer is running)
Press SLEEP once.

**Note**
Do not press SLEEP again before the remaining time indication goes out. If you do so, the timer will return to the setting mode.

To change the setting time (while the timer is running)
1. Press SLEEP,
2. Press SLEEP again while the remaining time is displayed and then reset the timer (30, 60 or 90 minutes).
Remote control operation

This remote control transmitter can be used to operate other units manufactured by this company in addition to this receiver, including TVs and VCRs manufactured since 1985, laser disc players, CD players (or CD changers) and cassette decks which are equipped with a remote control sensor.

For detailed information concerning operation steps, etc., please refer to the appropriate page for each unit and the respective operating instructions.

<td>To switch the remote control to CD player (or CD changer) operation mode</td>
</tr>
<tr>
<td><img src="image" alt="Start play" /></td>
<td>To start play</td>
</tr>
</tbody>
</table>

#### For 5 CD changer
- ![Select a disc number](image)

#### For MEGA CD changer ※
- ![Select the disc number](image)
- If you select "0", the changer will switch to the single disc play mode.
- (When selecting discs, the 10/- button does not respond to touch.)

#### [CD changer only]
- To start play from the desired disc

#### For your reference
- If you press this button instead of the arrow button shown in the above procedure, the CD changer will stop and display the disc number. To start the disc, press ▶.

Before requesting service for this unit, check the chart below for a possible cause of the problem you are experiencing. Some simple checks or a minor adjustment on your part may eliminate the problem and restore proper operation. If you are in doubt about some of the check points, or if the remedies indicated in the chart do not solve the problem, refer to the directory of authorized service centers (enclosed with this unit) to locate a convenient service center, or consult your Technics dealer for instructions.

<table>

<tbody>
<tr>
<td><strong>While listening to FM broadcasts</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| An unusual hissing noise is heard when listening to the broadcast in stereo, but not heard when listening monaurally. | A slight noise may be heard because the method used for modulation of FM stereo broadcasts is different than that used for monaural broadcasts. | • Try reducing the treble sound by using the treble control.  
• Try changing the location, height and/or direction of the antenna.  
• If an indoor antenna is being used, change to an outdoor antenna.  
• Try using an antenna with more elements. |
| Noise is excessive in both stereo and monaural broadcasts. | Poor location and/or direction of the antenna. Transmitting station is too far away. | |
| The FM stereo Indicator or the quartz lock indicator flickers, without completely illuminating. | Poor location and/or direction of the antenna. Transmitting station is too far away. | • Try changing the location, height and/or direction of the antenna.  
• If an indoor antenna is being used, change to an outdoor antenna.  
• Try using an antenna with more elements. |
| Excessive distortion in the sound of stereo broadcasts. | Nearby building or mountain. | |

| **While listening to MW/LW (For Australia and N.Z.: AM) broadcasts** | | |
| An unusual “beat” sound is heard. | Unit is being used at the same time as the television set. Interference from adjacent broadcast signal. | • Turn off the television set, or use this unit farther away from it.  
• Try reducing the treble sound by using the treble control. |
| A low-pitched “hum” sound is heard when the broadcast is tuned. | The AM loop antenna connection wires are too close to the power cord. | • Place the antenna connection wires and the power cord farther apart. |
| A strange hissing noise is produced continuously or intermittently. | Caused by the “discharge phenomenon” and the “oscillation phenomenon” of electric appliances (such as fluorescent lights, TV, small series-type motors, rectification equipment, etc.). | • Try placing this unit farther away from such equipment. |
| An MW broadcast station cannot be picked up clearly. | Frequency steps is set to 10 kHz. | • Hold down BAND for about 3 seconds. This will change frequency step to 9 kHz. |

| **Problems noted at all times** | | |
| Power will not switch ON. | The power cord plug is not completely inserted. | • Confirm that the power cord plug is connected completely. |
| No sound is heard. | Both A and B speakers are turned OFF. The muting function is ON. Connections are incomplete or incorrect to the speaker systems, etc. The incorrect input source has been selected. | • Press the HELP button. (The display will scroll through the causes of the problem.) Use this display as a guide to remedy the problem.  
• Check to be sure that all connection wires are correctly connected.  
• Check to be sure that the correct input source is selected. |
| Sound stops during a performance, or no sound is heard when the power is switched ON. (The word “OVERLOAD” appears on the display.) | The protection circuitry has functioned because the positive and negative speaker connection wires are “shorted”, speaker systems with an impedance less than the indicated rated impedance of this unit are used or under severe use, such as loud volume, excessive power and in an excessively hot environment. | • Turn the unit off, and after determining and correcting the cause, turn the unit on once again.  
• Use a speaker system of the proper impedance rating. |
