Disc information

[A] Discs that can be played
- Use discs with the logos at left and that conform to specifications. The unit cannot play other discs correctly.
- Do not use irregularly shaped discs (e.g. heart-shaped), as these can damage the unit.

Discs that cannot be played
DVD-RAM (2.6 GB, TYPE 1), DVD-ROM, CD-ROM, CDV, CD-G, +RW, DVD-RW, CVD, SACD, Divx Video Discs and Photo CD.

Disc structure
Disc structure and the labels given to the items on discs depend on the disc type.
- **Track:** the smallest division on DVD-Audio, CDs and Video CDs, or a single WMA/MP3 file.
- **Chapter:** the smallest division on DVD-Video.
- **Group:** collections of tracks on DVD-Audio and equivalent to folders or albums on data discs.
- **Title:** the largest division on DVD-Video, usually an entire movie.
- **Program:** the division on DVD-RAM equivalent to a single recording.
- **Picture:** a single JPEG file.
- **Play list:** a group of scenes on DVD-RAM.
- **Scene:** DVD-RAM program sections specified and grouped into play lists on a DVD video recorder.

Playing DVDs and Video CDs
The producer of these discs can control how they are played so you may not always be able to control play as described in these operating instructions (for example if the play time is not displayed or if a Video CD has menus). Read the disc's instructions carefully.

- **CD-R and CD-RW discs**
  This unit can play CD-R/RW (audio recording disc) recorded with CD-DA, video CD, WMA, MP3, or JPEG. Finalize the disc after recording.

- **DVD-R discs**
  Panasonic DVD-R recorded and finalized on a Panasonic DVD video recorder are played as DVD-Video on this unit.

- **DVD-RAM discs**
  DVD-RAM discs must meet the following conditions for this unit to be able to play them.

</tr>
</tbody>
</table>

Note

- **Video systems**
  This unit can play both the PAL and NTSC video systems. To view PAL or NTSC, however, your television must match the system used on the disc. PAL discs cannot be correctly viewed on an NTSC television. NTSC can be correctly viewed on a PAL television by converting the video signal to PAL 60 (➡ page 46, Video—NTSC Disc Output).

Speakers

Optimum location

- Front speaker (left)
- Center speaker
- Front speaker (right)
- Surround speaker (left)
- Surround speaker (right)

Note
Do not put the DVD/Video CD/CD changer on the top of the tuner/amplifier. Heat can damage your discs.

Caution
- Use the speakers only with the recommended system. Failure to do so may lead to damage to the amplifier and/or the speakers, and may result in the risk of fire. Consult a qualified service person if damage has occurred or if you experience a sudden change in performance.
- Do not attempt to attach these speakers to walls using methods other than those described in this manual.

Notes on speaker use
- You can damage your speakers and shorten their useful life if you play sound at high levels over extended periods.
- Reduce the volume in the following cases to avoid damage:
  - When playing distorted sound.
  - When the speakers are receiving howling from a microphone (for Australia and N.Z.) or record player, noise from FM broadcasts, or continuous signals from an oscillator, test disc, or electronic instrument.
  - When adjusting the sound quality.
  - When turning the unit on or off.

If irregular colouring occurs on your television
These speakers are designed to be used close to a television, but the picture may be affected with some televisions and set-up combinations. If this occurs, turn the television off for about 30 minutes. The television’s demagnetizing function should correct the problem. If it persists, move the speakers further away from the television.

Front speakers
Left and right front speakers are exactly same.

Surround speakers
Place either side of the listening position, or slightly to the rear, about 1 meter higher than ear level with the Technics logo facing toward the listening position. The effect varies with the type of music and the music source.

If you are unable to position the surround speakers as recommended, you can put them near the front speakers and still achieve a surround-like effect (page 34, VIRTUAL REAR SURROUND).

Attaching to a wall
Set the speaker onto screws and slide through bracket to lock into position.

Note
The wall or pillar on which the speakers are to be attached should be capable of supporting 5 kg per screw.
**STEP 2** Speaker leads

Do not connect the AC mains lead until all other connections are complete.

**STEP 5** Video cords

For the United Kingdom, Continental Europe and Russia
Use the RCAJ adaptor (included) if your television has a 21-pin SCART terminal. You do not have to connect anything to the AUDIO terminals.

For Australia and N.Z.
Use this connection if you have connected a VCR or Laser Disc player (page 44 [B]–[D]). This enables you to control the video and audio from this equipment with [INPUT SELECTOR].

**STEP 6** AC mains lead

(For the United Kingdom only)
BE SURE TO READ THE CAUTION FOR THE AC MAINS LEAD ON PAGE 4 BEFORE CONNECTION.

**Insertion of connector**
Even when the connector is perfectly inserted, depending on the type of inlet used, the front part of the connector may jut out as shown in the drawing. However there is no problem using the unit.

Decoder
A decoder restores the coded audio signals on DVDs to normal. This is called decoding.

Dolby Digital
This is a method of coding digital signals developed by Dolby Laboratories. Apart from stereo (2-channel) audio, these signals can also be multi-channel audio. A large amount of audio information can be recorded on one disc using this method.

DTS (Digital Theater Systems)
This surround system is used in many movie theaters around the world. There is good separation between the channels, so realistic sound effects are possible.

Dynamic range
Dynamic range is the difference between the lowest level of sound that can be heard above the noise of the equipment and the highest level of sound before distortion occurs.

Frame still and field still
Frames are the still pictures that go together to make a moving picture. There are about 30 frames shown each second. Frames are the still pictures that go together to make a moving picture.

I/P/B
I/P/B codes frames using these 3 picture types.

I: Intra coded picture (I-picture)
This picture has the best quality and is the best to use when adjusting the picture.

P: Predictive coded picture (P-picture)
This picture is calculated based on past I or P-pictures.

B: Bidirectionally-predictive coded picture (B-picture)
This picture is calculated by comparing past and future I and P-pictures so it has the lowest volume of information.

Linear PCM (pulse code modulation)
These are uncompressed digital signals, similar to those found on CDs.

Playback control (PBC)
If a Video CD has playback control, you can select scenes and information with menus.

WMA/MP3/JPEG information
- Discs must conform to ISO9660 level 1 or 2 (except for extended formats).
- This unit is compatible with multi-session but if there are a lot of sessions it takes more time for play to start. Keep the number of sessions to a minimum to avoid this.

- Noise may occur when playing WMA files.
- You cannot play WMA files that are copy protected.
- WMA files must have the extension "\.WMA" or "\wma".
- This unit is not compatible with ID3 tags.
- If you play an MP3 track that includes still picture data, it will take some time before the music itself starts playing and the elapsed time will not be displayed during this time. Even after the track starts, the correct play time will not be displayed.
- MP3 files must have the extension "\.MP3" or "\.mp3".

To view JPEG files on this unit:
- Take them on a digital camera that meets the DCF (Design rule for Camera File system) standard. Some digital cameras have functions that are not supported by the DCF standard like automatic picture rotation which may render a picture un-viewable.
- Do not alter the files in any way or save them under a different name.
- Ensure they have the extension "\JPEG" or "\.jpg", "\JPEG" or "\.jpeg".
- This unit cannot display moving pictures, MOTION JPEG and other such formats, still pictures other than JPEG (i.e. TIFF) or play associated sound.

Naming folders and files
At the time of recording, give folders and file names 3-digit prefixes in the order you want to play them (this may not work at times).
